The University of the State of New York
REGENTS HIGH SCHOOL EXAMINATION

GEOMETRY

Wednesday, August 14, 2019 — 12:30 to 3:30 p.m., only

Student Name: ________________________________________________

School Name: ________________________________________________

The possession or use of any communications device is strictly prohibited when taking this examination. If you have or use any communications device, no matter how briefly, your examination will be invalidated and no score will be calculated for you.

Print your name and the name of your school on the lines above.

A separate answer sheet for Part I has been provided to you. Follow the instructions from the proctor for completing the student information on your answer sheet.

This examination has four parts, with a total of 35 questions. You must answer all questions in this examination. Record your answers to the Part I multiple-choice questions on the separate answer sheet. Write your answers to the questions in Parts II, III, and IV directly in this booklet. All work should be written in pen, except for graphs and drawings, which should be done in pencil. Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc. Utilize the information provided for each question to determine your answer. Note that diagrams are not necessarily drawn to scale.

The formulas that you may need to answer some questions in this examination are found at the end of the examination. This sheet is perforated so you may remove it from this booklet.

Scrap paper is not permitted for any part of this examination, but you may use the blank spaces in this booklet as scrap paper. A perforated sheet of scrap graph paper is provided at the end of this booklet for any question for which graphing may be helpful but is not required. You may remove this sheet from this booklet. Any work done on this sheet of scrap graph paper will not be scored.

When you have completed the examination, you must sign the statement printed at the end of the answer sheet, indicating that you had no unlawful knowledge of the questions or answers prior to the examination and that you have neither given nor received assistance in answering any of the questions during the examination. Your answer sheet cannot be accepted if you fail to sign this declaration.

Notice...
A graphing calculator, a straightedge (ruler), and a compass must be available for you to use while taking this examination.

DO NOT OPEN THIS EXAMINATION BOOKLET UNTIL THE SIGNAL IS GIVEN.
Part I

Answer all 24 questions in this part. Each correct answer will receive 2 credits. No partial credit will be allowed. Utilize the information provided for each question to determine your answer. Note that diagrams are not necessarily drawn to scale. For each statement or question, choose the word or expression that, of those given, best completes the statement or answers the question. Record your answers on your separate answer sheet. [48]

1. On the set of axes below, $\overline{AB}$ is dilated by a scale factor of $\frac{5}{2}$ centered at point $P$.

Which statement is always true?

1. $\overline{PA} \equiv \overline{AA'}$
2. $\overline{AB} \parallel \overline{A'B'}$
3. $\overline{AB} = \overline{A'B'}$
4. $\frac{5}{2} (\overline{A'B'}) = \overline{AB}$

2. The coordinates of the vertices of parallelogram $CDEH$ are $C(-5,5)$, $D(2,5)$, $E(-1,-1)$, and $H(-8,-1)$. What are the coordinates of $P$, the point of intersection of diagonals $\overline{CE}$ and $\overline{DH}$?

1. $(-2,3)$
2. $(-2,2)$
3. $(-3,2)$
4. $(-3,-2)$
3 The coordinates of the endpoints of \( QS \) are \( Q(-9,8) \) and \( S(9,-4) \). Point \( R \) is on \( QS \) such that \( QR:RS \) is in the ratio of 1:2. What are the coordinates of point \( R \)?

(1) (0,2)  
(2) (3,0)  
(3) (−3,4)  
(4) (−6,6)

4 If the altitudes of a triangle meet at one of the triangle’s vertices, then the triangle is

(1) a right triangle  
(2) an acute triangle  
(3) an obtuse triangle  
(4) an equilateral triangle

5 In the diagram below of \( \triangle ACD \), \( DB \) is a median to \( AC \), and \( AB \equiv DB \).

If \( m\angle DAB = 32^\circ \), what is \( m\angle BDC \)?

(1) 32°  
(2) 52°  
(3) 58°  
(4) 64°
6 What are the coordinates of the center and the length of the radius of the circle whose equation is \( x^2 + y^2 = 8x - 6y + 39 \)?

(1) center \((-4,3)\) and radius 64
(2) center \((4,-3)\) and radius 64
(3) center \((-4,3)\) and radius 8
(4) center \((4,-3)\) and radius 8

7 In the diagram below of parallelogram \(ABCD\), \(AFGB\), \(CF\) bisects \(\angle DCB\), \(DG\) bisects \(\angle ADC\), and \(CF\) and \(DG\) intersect at \(E\).

If \(m\angle B = 75^\circ\), then the measure of \(\angle EFA\) is

(1) 142.5°
(2) 127.5°
(3) 52.5°
(4) 37.5°

8 What is an equation of a line that is perpendicular to the line whose equation is \(2y + 3x = 1\)?

(1) \(y = \frac{2}{3}x + \frac{5}{2}\)
(2) \(y = \frac{3}{2}x + 2\)
(3) \(y = -\frac{2}{3}x + 1\)
(4) \(y = -\frac{3}{2}x + \frac{1}{2}\)
9 Triangles $ABC$ and $RST$ are graphed on the set of axes below.

Which sequence of rigid motions will prove $\triangle ABC \cong \triangle RST$?

(1) a line reflection over $y = x$
(2) a rotation of 180° centered at (1,0)
(3) a line reflection over the $x$-axis followed by a translation of 6 units right
(4) a line reflection over the $x$-axis followed by a line reflection over $y = 1$

10 If the line represented by $y = -\frac{1}{4}x - 2$ is dilated by a scale factor of 4 centered at the origin, which statement about the image is true?

(1) The slope is $-\frac{1}{4}$ and the $y$-intercept is $-8$.
(2) The slope is $-\frac{1}{4}$ and the $y$-intercept is $-2$.
(3) The slope is $-1$ and the $y$-intercept is $-8$.
(4) The slope is $-1$ and the $y$-intercept is $-2$. 

Use this space for computations.
11 Square \( MATH \) has a side length of 7 inches. Which three-dimensional object will be formed by continuously rotating square \( MATH \) around side \( AT \)?

(1) a right cone with a base diameter of 7 inches
(2) a right cylinder with a diameter of 7 inches
(3) a right cone with a base radius of 7 inches
(4) a right cylinder with a radius of 7 inches

12 Circle \( O \) with a radius of 9 is drawn below. The measure of central angle \( AOC \) is 120°.

What is the area of the shaded sector of circle \( O \)?

(1) \( 6\pi \)
(2) \( 12\pi \)
(3) \( 27\pi \)
(4) \( 54\pi \)

13 In quadrilateral \( QRST \), diagonals \( QS \) and \( RT \) intersect at \( M \). Which statement would always prove quadrilateral \( QRST \) is a parallelogram?

(1) \( \angle TQR \) and \( \angle QRS \) are supplementary.
(2) \( QM \equiv SM \) and \( QT \equiv RS \)
(3) \( QR \equiv TS \) and \( QT \equiv RS \)
(4) \( QR \equiv TS \) and \( QT \parallel RS \)
14 A standard-size golf ball has a diameter of 1.680 inches. The material used to make the golf ball weighs 0.6523 ounce per cubic inch. What is the weight, to the nearest hundredth of an ounce, of one golf ball?

(1) 1.10  (3) 2.48
(2) 1.62  (4) 3.81

15 Chelsea is sitting 8 feet from the foot of a tree. From where she is sitting, the angle of elevation of her line of sight to the top of the tree is 36°. If her line of sight starts 1.5 feet above ground, how tall is the tree, to the nearest foot?

(1) 8  (3) 6
(2) 7  (4) 4

16 In the diagram below of right triangle $ABC$, altitude $CD$ intersects hypotenuse $AB$ at $D$.

Which equation is always true?

(1) $\frac{AD}{AC} = \frac{CD}{BC}$  (3) $\frac{AC}{CD} = \frac{BC}{CD}$
(2) $\frac{AD}{CD} = \frac{BD}{CD}$  (4) $\frac{AD}{AC} = \frac{AC}{BD}$
17 A countertop for a kitchen is modeled with the dimensions shown below. An 18-inch by 21-inch rectangle will be removed for the installation of the sink.

![Counterdesign](image)

What is the area of the top of the installed countertop, to the nearest square foot?

(1) 26  (3) 22  
(2) 23  (4) 19

18 In the diagram below, $BC$ connects points $B$ and $C$ on the congruent sides of isosceles triangle $ADE$, such that $\triangle ABC$ is isosceles with vertex angle $A$.

![Triangle](image)

If $AB = 10$, $BD = 5$, and $DE = 12$, what is the length of $BC$?

(1) 6  (3) 8  
(2) 7  (4) 9
19 In ΔABC below, angle C is a right angle.

Which statement must be true?

(1) $\sin A = \cos B$  
(2) $\sin A = \tan B$  
(3) $\sin B = \tan A$  
(4) $\sin B = \cos B$

20 In right triangle RST, altitude $TV$ is drawn to hypotenuse $RS$. If $RV = 12$ and $RT = 18$, what is the length of $SV$?

(1) $6\sqrt{5}$  
(2) 15  
(3) $6\sqrt{6}$  
(4) 27

21 What is the volume, in cubic centimeters, of a right square pyramid with base edges that are 64 cm long and a slant height of 40 cm?

(1) 8192.0  
(2) $13,653.\overline{3}$  
(3) 32,768.0  
(4) $54,613.\overline{3}$
22 In the diagram below, chords $PQ$ and $RS$ of circle $O$ intersect at $T$.

Which relationship must always be true?

1. $RT = TQ$
2. $RT = TS$
3. $RT + TS = PT + TQ$
4. $RT \times TS = PT \times TQ$

23 A rhombus is graphed on the set of axes below.

Which transformation would carry the rhombus onto itself?

1. $180^\circ$ rotation counterclockwise about the origin
2. reflection over the line $y = \frac{1}{2}x + 1$
3. reflection over the line $y = 0$
4. reflection over the line $x = 0$
A 15-foot ladder leans against a wall and makes an angle of $65^\circ$ with the ground. What is the horizontal distance from the wall to the base of the ladder, to the nearest tenth of a foot?

(1) 6.3  (3) 12.9
(2) 7.0  (4) 13.6
25 In parallelogram $ABCD$ shown below, $m\angle DAC = 98^\circ$ and $m\angle ACD = 36^\circ$.

What is the measure of angle $B$? Explain why.
An airplane took off at a constant angle of elevation. After the plane traveled for 25 miles, it reached an altitude of 5 miles, as modeled below.

To the nearest tenth of a degree, what was the angle of elevation?
27 On the set of axes below, $\triangle ABC \cong \triangle DEF$.

Describe a sequence of rigid motions that maps $\triangle ABC$ onto $\triangle DEF$. 
28 The vertices of \( \triangle ABC \) have coordinates \( A(-2, -1), B(10, -1), \) and \( C(4,4) \). Determine and state the area of \( \triangle ABC \). [The use of the set of axes below is optional.]
29 Using the construction below, state the degree measure of $\angle CAD$. Explain why.
In the diagram below of circle $K$, secant $PLKE$ and tangent $PZ$ are drawn from external point $P$. If $m\angle LZ = 56^\circ$, determine and state the degree measure of angle $P$. 
31 A large water basin is in the shape of a right cylinder. The inside of the basin has a diameter of $8 \frac{1}{4}$ feet and a height of 3 feet. Determine and state, to the nearest cubic foot, the number of cubic feet of water that it will take to fill the basin to a level of $\frac{1}{2}$ foot from the top.
Part III

Answer all 3 questions in this part. Each correct answer will receive 4 credits. Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc. Utilize the information provided for each question to determine your answer. Note that diagrams are not necessarily drawn to scale. For all questions in this part, a correct numerical answer with no work shown will receive only 1 credit. All answers should be written in pen, except for graphs and drawings, which should be done in pencil. [12]

32. Triangle $ABC$ is shown below. Using a compass and straightedge, construct the dilation of $\triangle ABC$ centered at $B$ with a scale factor of 2.
   [Leave all construction marks.]

Is the image of $\triangle ABC$ similar to the original triangle? Explain why.
33 In the diagram below, \( \triangle ABE \cong \triangle CBD \).

Prove: \( \triangle AFD \cong \triangle CFE \)
A cargo trailer, pictured below, can be modeled by a rectangular prism and a triangular prism. Inside the trailer, the rectangular prism measures 6 feet wide and 10 feet long. The walls that form the triangular prism each measure 4 feet wide inside the trailer. The diagram below is of the floor, showing the inside measurements of the trailer.

If the inside height of the trailer is 6.5 feet, what is the total volume of the inside of the trailer, to the nearest cubic foot?
35 The coordinates of the vertices of \( \triangle ABC \) are \( A(1,2), B(-5,3), \) and \( C(-6,-3). \)

Prove that \( \triangle ABC \) is isosceles.
[The use of the set of axes on the next page is optional.]

State the coordinates of point \( D \) such that quadrilateral \( ABCD \) is a square.

Question 35 is continued on the next page.
Question 35 continued

Prove that your quadrilateral $ABCD$ is a square.
[The use of the set of axes below is optional.]
High School Math Reference Sheet

1 inch = 2.54 centimeters  
1 meter = 39.37 inches  
1 mile = 5280 feet  
1 mile = 1760 yards  
1 mile = 1.609 kilometers

1 kilometer = 0.62 mile  
1 pound = 16 ounces  
1 pound = 0.454 kilogram  
1 kilogram = 2.2 pounds  
1 ton = 2000 pounds

1 cup = 8 fluid ounces  
1 pint = 2 cups  
1 quart = 2 pints  
1 gallon = 4 quarts  
1 gallon = 3.785 liters

1 liter = 0.264 gallon  
1 liter = 1000 cubic centimeters

The chart for determining students' final examination scores for the August 2019 Regents Examination in Geometry will be posted on the Department's web site at: http://www.p12.nysed.gov/assessment/ on the day of the examination. Conversion charts provided for the previous administrations of the Regents Examination in Geometry must NOT be used to determine students’ final scores for this administration.
FOR TEACHERS ONLY

The University of the State of New York
REGENTS HIGH SCHOOL EXAMINATION

GEOMETRY

Wednesday, August 14, 2019 — 12:30 to 3:30 p.m., only

RATING GUIDE

Updated information regarding the rating of this examination may be posted on the New York State Education Department's web site during the rating period. Check this web site at: http://www.p12.nysed.gov/assessment/ and select the link “Scoring Information” for any recently posted information regarding this examination. This site should be checked before the rating process for this examination begins and several times throughout the Regents Examination period.

The Department is providing supplemental scoring guidance, the “Model Response Set,” for the Regents Examination in Geometry. This guidance is intended to be part of the scorer training. Schools should use the Model Response Set along with the rubrics in the Scoring Key and Rating Guide to help guide scoring of student work. While not reflective of all scenarios, the Model Response Set illustrates how less common student responses to constructed-response questions may be scored. The Model Response Set will be available on the Department’s web site at: http://www.nysedregents.org/geometryre/.
Mechanics of Rating

The following procedures are to be followed for scoring student answer papers for the Regents Examination in Geometry. More detailed information about scoring is provided in the publication *Information Booklet for Scoring the Regents Examination in Geometry*.

Do not attempt to correct the student’s work by making insertions or changes of any kind. In scoring the constructed-response questions, use check marks to indicate student errors. Unless otherwise specified, mathematically correct variations in the answers will be allowed. Units need not be given when the wording of the questions allows such omissions.

Each student’s answer paper is to be scored by a minimum of three mathematics teachers. No one teacher is to score more than approximately one-third of the constructed-response questions on a student’s paper. Teachers may not score their own students’ answer papers. On the student’s separate answer sheet, for each question, record the number of credits earned and the teacher’s assigned rater/scorer letter.

Schools are not permitted to rescore any of the constructed-response questions on this exam after each question has been rated once, regardless of the final exam score. Schools are required to ensure that the raw scores have been added correctly and that the resulting scale score has been determined accurately.

Raters should record the student’s scores for all questions and the total raw score on the student’s separate answer sheet. Then the student’s total raw score should be converted to a scale score by using the conversion chart that will be posted on the Department’s web site at: [http://www.p12.nysed.gov/assessment/](http://www.p12.nysed.gov/assessment/) on Wednesday, August 14, 2019. Because scale scores corresponding to raw scores in the conversion chart may change from one administration to another, it is crucial that, for each administration, the conversion chart provided for that administration be used to determine the student’s final score. The student’s scale score should be entered in the box provided on the student’s separate answer sheet. The scale score is the student’s final examination score.
I. General Principles for Rating

The rubrics for the constructed-response questions on the Regents Examination in Geometry are designed to provide a systematic, consistent method for awarding credit. The rubrics are not to be considered all-inclusive; it is impossible to anticipate all the different methods that students might use to solve a given problem. Each response must be rated carefully using the teacher's professional judgment and knowledge of mathematics; all calculations must be checked. The specific rubrics for each question must be applied consistently to all responses. In cases that are not specifically addressed in the rubrics, raters must follow the general rating guidelines in the publication Information Booklet for Scoring the Regents Examination in Geometry, use their own professional judgment, confer with other mathematics teachers, and/or contact the State Education Department for guidance. During each Regents Examination administration period, rating questions may be referred directly to the Education Department. The contact numbers are sent to all schools before each administration period.

II. Full-Credit Responses

A full-credit response provides a complete and correct answer to all parts of the question. Sufficient work is shown to enable the rater to determine how the student arrived at the correct answer. When the rubric for the full-credit response includes one or more examples of an acceptable method for solving the question (usually introduced by the phrase “such as”), it does not mean that there are no additional acceptable methods of arriving at the correct answer. Unless otherwise specified, mathematically correct alternative solutions should be awarded credit. The only exceptions are those questions that specify the type of solution that must be used; e.g., an algebraic solution or a graphic solution. A correct solution using a method other than the one specified is awarded half the credit of a correct solution using the specified method.

III. Appropriate Work

Full-Credit Responses: The directions in the examination booklet for all the constructed-response questions state: “Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc.” The student has the responsibility of providing the correct answer and showing how that answer was obtained. The student must “construct” the response; the teacher should not have to search through a group of seemingly random calculations scribbled on the student paper to ascertain what method the student may have used.

Responses With Errors: Rubrics that state “Appropriate work is shown, but…” are intended to be used with solutions that show an essentially complete response to the question but contain certain types of errors, whether computational, rounding, graphing, or conceptual. If the response is incomplete; i.e., an equation is written but not solved or an equation is solved but not all of the parts of the question are answered, appropriate work has not been shown. Other rubrics address incomplete responses.

IV. Multiple Errors

Computational Errors, Graphing Errors, and Rounding Errors: Each of these types of errors results in a 1-credit deduction. Any combination of two of these types of errors results in a 2-credit deduction. No more than 2 credits should be deducted for such mechanical errors in a 4-credit question and no more than 3 credits should be deducted in a 6-credit question. The teacher must carefully review the student's work to determine what errors were made and what type of errors they were.

Conceptual Errors: A conceptual error involves a more serious lack of knowledge or procedure. Examples of conceptual errors include using the incorrect formula for the area of a figure, choosing the incorrect trigonometric function, or multiplying the exponents instead of adding them when multiplying terms with exponents.

If a response shows repeated occurrences of the same conceptual error, the student should not be penalized twice. If the same conceptual error is repeated in responses to other questions, credit should be deducted in each response.

For 4- and 6-credit questions, if a response shows one conceptual error and one computational, graphing, or rounding error, the teacher must award credit that takes into account both errors. Refer to the rubric for specific scoring guidelines.
Part II

For each question, use the specific criteria to award a maximum of 2 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(25) \[2\] 46, and a correct explanation is written.

\[1\] Appropriate work is shown, but one computational error is made.

\[\text{or}\]

\[1\] Appropriate work is shown, but one conceptual error is made.

\[\text{or}\]

\[1\] An appropriate explanation is written, but \(m\angle B\) is missing.

\[\text{or}\]

\[1\] 46, but the explanation is missing, incorrect, or incomplete.

\[0\] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(26) \[2\] 11.5, and correct work is shown.

\[1\] Appropriate work is shown, but one computational or rounding error is made.

\[\text{or}\]

\[1\] Appropriate work is shown, but one conceptual error is made.

\[\text{or}\]

\[1\] A correct trigonometric equation is written, but no further correct work is shown.

\[\text{or}\]

\[1\] 11.5, but no work is shown.

\[0\] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
(27) [2] A correct sequence of rigid motions is written.

[1] An appropriate sequence of rigid motions is written, but one conceptual error is made.

or

[1] An appropriate sequence of rigid motions is written, but it is incomplete or partially correct.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(28) [2] 30, and correct work is shown.

[1] Appropriate work is shown, but one computational or graphing error is made.

or

[1] Appropriate work is shown, but one conceptual error is made.

or

[1] 30, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(29) [2] 30, and a correct explanation is written.

[1] 30, but the explanation is missing, incorrect, or incomplete.

or

[1] An explanation identifying the construction as a construction of an equilateral triangle and an angle bisector is given, but 30 is not stated.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
(30)  [2] 34, and correct work is shown.

[1] Appropriate work is shown, but one computational error is made.

    or

[1] Appropriate work is shown, but one conceptual error is made.

    or

[1] A correct equation is written to find the degree measure of angle P, but no further correct work is shown.

    or

[1] 34, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(31)  [2] 134, and correct work is shown.

[1] Appropriate work is shown, but one computational or rounding error is made.

    or

[1] Appropriate work is shown, but one conceptual error is made.

    or

[1] 134, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
Part III

For each question, use the specific criteria to award a maximum of 4 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(32) [4] A correct construction is drawn showing all construction arcs. Yes is indicated, and a correct explanation is given.

[3] An appropriate construction is drawn, but one construction error is made. Yes, and a correct explanation is given.

or

[3] A correct construction is drawn. Yes, and an incomplete or partially correct explanation is given.

[2] A correct construction is drawn, but no further correct work is shown.

or

[2] Yes, and a correct explanation of why a dilated triangle is similar to its image is written, but no further correct work is shown.

[1] An appropriate construction is drawn, but one construction error is made. The explanation is missing or incorrect.

or

[1] All appropriate construction arcs are drawn, but the triangle is not drawn. No further correct work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
[4] A complete and correct proof that includes a concluding statement is written.

[3] A proof is written that demonstrates a thorough understanding of the method of proof and contains no conceptual errors, but one statement and/or reason is missing or incorrect, or the concluding statement is missing.

[2] A proof is written that demonstrates a good understanding of the method of proof and contains no conceptual errors, but two statements and/or reasons are missing or incorrect.

or

[2] A proof is written that demonstrates a good understanding of the method of proof, but one conceptual error is made.

[1] Only one correct relevant statement and reason are written.

[0] The “given” and/or the “prove” statements are written, but no further correct relevant statements are written.

or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
(34) 442, and correct work is shown.

[3] Appropriate work is shown, but one computational or rounding error is made.

or

[3] Correct work is shown to determine the total area of the base of the trailer, but no further correct work is shown.

[2] Appropriate work is shown, but two computational or rounding errors are made.

or

[2] Appropriate work is shown, but one conceptual error is made.

or

[2] Correct work is shown to determine the volume of the triangular prism of the trailer, but no further correct work is shown.

or

[2] Correct work is shown to determine the volume of the rectangular prism and the height of the triangular base, but no further correct work is shown.

[1] Appropriate work is shown, but one conceptual error and one computational or rounding error are made.

or

[1] Correct work is shown to determine the height of the triangular base of the trailer, but no further correct work is shown.

or

[1] Appropriate work is shown to find the volume of the rectangular prism, but no further correct work is shown.

or

[1] 442, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
Part IV

For this question, use the specific criteria to award a maximum of 6 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(35)  [6] Correct work is shown to prove $\triangle ABC$ is an isosceles triangle. $D(0, -4)$ is stated, and correct work is shown to prove $ABCD$ is a square. Correct concluding statements are made.

[5] Appropriate work is shown, but one computational or graphing error is made.

or

[5] Appropriate work is shown, but one concluding statement is missing or incorrect.

or

[5] Correct proofs are written, but $D(0, -4)$ is not stated. Correct concluding statements are made.

[4] Appropriate work is shown, but two computational or graphing errors are made.

or

[4] Appropriate work is shown, but one conceptual error is made.

or

[4] $D(0, -4)$ is stated, and correct work is shown to prove $ABCD$ is a square, and a correct concluding statement is made. No further correct work is shown.

[3] Appropriate work is shown, but three or more computational or graphing errors are made.

or

[3] Appropriate work is shown, but one conceptual error and one computational or graphing error are made.

or

[3] Correct work is shown to prove $\triangle ABC$ is an isosceles triangle, $D(0, -4)$ is stated, and a correct concluding statement is made. No further correct work is shown.
[2] Appropriate work is shown, but one conceptual error and two or more computational or graphing errors are made.

*or*

[2] Appropriate work is shown, but two conceptual errors are made.

*or*

[2] Correct work is shown to prove \( \triangle ABC \) is an isosceles triangle, and a correct concluding statement is made, but no further correct work is shown.

[1] Appropriate work is shown, but two conceptual errors and one computational or graphing error are made.

*or*

[1] \( D(0, -4) \) is stated, but no further correct work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

Online Submission of Teacher Evaluations of the Test to the Department

Suggestions and feedback from teachers provide an important contribution to the test development process. The Department provides an online evaluation form for State assessments. It contains spaces for teachers to respond to several specific questions and to make suggestions. Instructions for completing the evaluation form are as follows:

2. Select the test title.
3. Complete the required demographic fields.
4. Complete each evaluation question and provide comments in the space provided.
5. Click the SUBMIT button at the bottom of the page to submit the completed form.
25 In parallelogram $ABCD$ shown below, $\angle DAC = 98^\circ$ and $\angle ACD = 36^\circ$.

What is the measure of angle $B$? Explain why.

\[
\text{ABCD is a } \parallel \text{-gram, so } \overline{AB} \parallel \overline{CD} \\
\text{By alt. int. } \angle \text{ theorem, } \angle BCA = 98^\circ; \angle BAC = 36^\circ. \angle \text{s in } \triangle BAC \text{ must} \\
\text{add up to } 180^\circ, \text{ so } \angle B = 46^\circ \\
\text{Since } 36 + 98 = 134, \text{ and } 180 - 134 = 46.
\]

Score 2: The student gave a complete and correct response.
25 In parallelogram $ABCD$ shown below, $\angle DAC = 98^\circ$ and $\angle ACD = 36^\circ$.

$\angle DAC = 98^\circ$ because $\angle$ sum of $\triangle ACD$.
$\angle DCA = \angle B$ because $\angle$ in a parallelogram, opposite $\angle$s are $\cong$.

So $\angle B = 46^\circ$.

Score 2: The student gave a complete and correct response.
25 In parallelogram $ABCD$ shown below, $m\angle DAC = 98^\circ$ and $m\angle ACD = 36^\circ$.

What is the measure of angle $B$? Explain why.

First, I found $m\angle D$. A triangle has $180^\circ$, so I added $m\angle A$ and $m\angle C$ from $\triangle DAC$ and got $134^\circ$. Then, I subtracted that from $180^\circ$ in order to get $m\angle D$. $m\angle D = 46^\circ$. Finally, I know opposite angles in a parallelogram are congruent, so the measured $m\angle D = m\angle B$. By chain rule, $m\angle B$ would be $46^\circ$.

Score 2: The student gave a complete and correct response.
In parallelogram $ABCD$ shown below, $m\angle DAC = 98^\circ$ and $m\angle ACD = 36^\circ$.

What is the measure of angle $B$? Explain why.

\[ 98 + 36 = 134 \]
\[ 180 - 134 = 46 \]

$m \angle B$ is $46^\circ$ because of alternate interior angles at $\angle A + \angle C$ and $AB \parallel CD$.

Score 2: The student gave a complete and correct response.
25 In parallelogram $ABCD$ shown below, $\angle DAC = 98^\circ$ and $\angle ACD = 36^\circ$.

What is the measure of angle $B$? Explain why.

Angle $B$ is $48$ because in a parallelogram opposite angles are equal. If $\angle D$ is $48$, then $\angle B$ is $48$.

Score 1: The student made a transcription error. The student wrote an appropriate explanation.
25 In parallelogram $ABCD$ shown below, $m\angle DAC = 98^\circ$ and $m\angle ACD = 36^\circ$.

What is the measure of angle $B$? Explain why.

\[
\begin{align*}
98 + 36 &= 134 \\
180 - 134 &= 46 \\
2D &= 46 \\
D &= 23
\end{align*}
\]

Score 1: The student found $m\angle B = 46^\circ$, but did not write an explanation.
25 In parallelogram $ABCD$ shown below, $\angle DAC = 98^\circ$ and $\angle ACD = 36^\circ$.

What is the measure of angle $B$? Explain why.

Angle $B$ is $46^\circ$ because the two triangles are the same so they have the same angles.

Score 1: The student found $m\angle B = 46^\circ$, but the explanation is incomplete.
In parallelogram $ABCD$ shown below, $m\angle DAC = 98^\circ$ and $m\angle ACD = 36^\circ$.

What is the measure of angle $B$? Explain why.

The measure of angle $B$ is $23^\circ$ because in a parallelogram, opposite sides are congruent and a triangle equals to $180^\circ$. If you add the two measures and subtract $180^\circ$ you get $44^\circ$, and divided by $2$ the measure is $23^\circ$.

Score 0: The student gave a completely incorrect response.
26 An airplane took off at a constant angle of elevation. After the plane traveled for 25 miles, it reached an altitude of 5 miles, as modeled below.

To the nearest tenth of a degree, what was the angle of elevation?

\[ \sin^{-1} \left( \frac{5}{25} \right) = 11.5^\circ \]

**Score 2:** The student gave a complete and correct response.
An airplane took off at a constant angle of elevation. After the plane traveled for 25 miles, it reached an altitude of 5 miles, as modeled below.

To the nearest tenth of a degree, what was the angle of elevation?

\[
\sin \theta = \frac{5}{25} \\
\sin^{-1} \left( \frac{5}{25} \right) \\
11.537 \\
\hline
11.5^\circ
\]

Score 2: The student gave a complete and correct response.
26 An airplane took off at a constant angle of elevation. After the plane traveled for 25 miles, it reached an altitude of 5 miles, as modeled below.

To the nearest tenth of a degree, what was the angle of elevation?

\[ \sin \theta = \frac{5}{25} \]

**Score 1:** The student wrote a correct trigonometric equation, but no further correct work was shown.
An airplane took off at a constant angle of elevation. After the plane traveled for 25 miles, it reached an altitude of 5 miles, as modeled below.

To the nearest tenth of a degree, what was the angle of elevation?

\[
\sin x = \frac{5}{25} \\
x = \sin^{-1} \left( \frac{5}{25} \right) \\
x = 11.53695903 \text{ degrees}
\]

The angle of elevation is \(12^\circ\).

**Score 1:** The student did not round the answer to the nearest tenth of a degree.
An airplane took off at a constant angle of elevation. After the plane traveled for 25 miles, it reached an altitude of 5 miles, as modeled below.

\[
\tan \theta = \frac{5}{25}
\]

\[
25\theta = 5
\]

\[
\theta = 20^\circ
\]

Score 0: The student gave a completely incorrect response.
26 An airplane took off at a constant angle of elevation. After the plane traveled for 25 miles, it reached an altitude of 5 miles, as modeled below.

To the nearest tenth of a degree, what was the angle of elevation?

\[
\begin{align*}
5^2 + b^2 &= 25^2 \\
50 + b^2 &= 625 \\
\sqrt{b^2} &= \sqrt{600} \\
b &= 24.4
\end{align*}
\]

Score 0: The student gave a completely incorrect response.
Question 27

27 On the set of axes below, \( \triangle ABC \equiv \triangle DEF \).

Describe a sequence of rigid motions that maps \( \triangle ABC \) onto \( \triangle DEF \).

A reflection over the y-axis then a reflection over \( y=2 \).

Score 2: The student gave a complete and correct response.
27 On the set of axes below, \( \triangle ABC \cong \triangle DEF \).

Describe a sequence of rigid motions that maps \( \triangle ABC \) onto \( \triangle DEF \).

1. reflection across the \( x \)-axis
2. reflection across \( y \)-axis
3. translation up 4 units

**Score 2:** The student gave a complete and correct response.
On the set of axes below, $\triangle ABC \cong \triangle DEF$.

Describe a sequence of rigid motions that maps $\triangle ABC$ onto $\triangle DEF$.

A rotation of $180^\circ$ around the point $(0,2)$
27 On the set of axes below, $\triangle ABC \cong \triangle DEF$.

Describe a sequence of rigid motions that maps $\triangle ABC$ onto $\triangle DEF$.

Translat $\triangle ABC$ down 2 and right 6 then rotate it 180°

Score 1: The student did not state point $D$ as the center of rotation.
On the set of axes below, \( \triangle ABC \equiv \triangle DEF \).

Describe a sequence of rigid motions that maps \( \triangle ABC \) onto \( \triangle DEF \).

- Rotation \( 180^\circ \), then a translation 4 units up.

Score 1: The student did not state the origin as the center of rotation.
27 On the set of axes below, \( \triangle ABC \cong \triangle DEF \).

Describe a sequence of rigid motions that maps \( \triangle ABC \) onto \( \triangle DEF \).

\( \triangle ABC \) would have to undergo a rotation of 90°, then translated 10 and 5.

Score 0: The student gave a completely incorrect response.
The vertices of $\triangle ABC$ have coordinates $A(-2,-1)$, $B(10,-1)$, and $C(4,4)$. Determine and state the area of $\triangle ABC$. [The use of the set of axes below is optional.]

Score 2: The student gave a complete and correct response.
28 The vertices of $\triangle ABC$ have coordinates $A(-2,-1)$, $B(10,-1)$, and $C(4,4)$. Determine and state the area of $\triangle ABC$. [The use of the set of axes below is optional.]

**Score 2:** The student gave a complete and correct response.

    &= 18
\end{align*}
\]

**Score 1:** The student graphed $\triangle ABC$ incorrectly, but found the area of the triangle of equal difficulty.
28 The vertices of $\triangle ABC$ have coordinates $A(-2,-1)$, $B(10,-1)$, and $C(4,4)$. Determine and state the area of $\triangle ABC$. [The use of the set of axes below is optional.]

\[ A = \frac{1}{2}bh \]
\[ = \frac{1}{2}(\sqrt{148})x \]

Score 0: The student did not show enough correct relevant work to receive any credit.
28 The vertices of \( \triangle ABC \) have coordinates \( A(-2, -1), B(10, -1), \) and \( C(4, 4). \) Determine and state the area of \( \triangle ABC. \) [The use of the set of axes below is optional.]

\[
\begin{align*}
\Delta &= \frac{1}{2} (b \cdot h) \\
d &= \sqrt{(10 - (-2))^2 + (-1 - (-1))^2} \\
d &= \sqrt{144 + 3} \\
d &= \sqrt{147} \\
\end{align*}
\]

Score 0: The student did not show enough correct relevant work to receive any credit.
29 Using the construction below, state the degree measure of \( \angle CAD \). Explain why.

1. \( \triangle CAB \) is an equilateral triangle because all its sides are the radii of congruent circles.
2. The angle measures in an equilateral triangle are 60°.
3. \( \angle CAD \) is 30° because an angle bisector was constructed, and angle bisectors cut an angle into 2 congruent pieces, so 60° \( \div 2 \) = 30°

Score 2: The student gave a complete and correct response.
29 Using the construction below, state the degree measure of \( \angle CAD \). Explain why.

\[
\begin{align*}
\angle CAD \text{ is } 30^\circ \text{ because } \\
\angle CAB \text{ is } 60^\circ \text{ because } \triangle ABC \text{ is equilateral. Then } \angle CAB \text{ was cut in half making } \angle CAD \text{ equal to } 30^\circ
\end{align*}
\]

**Score 2:** The student gave a complete and correct response.
29 Using the construction below, state the degree measure of $\angle CAD$. Explain why.

$\triangle ABC$ is equilateral

$\angle CAD = \frac{1}{2} \angle CAB$

$\angle CAD$ is half of $\angle CAB$

because it was bisected

Score 1: The student wrote a correct explanation, but did not state that the angle measures 30°.
Question 29

29 Using the construction below, state the degree measure of \( \angle CAD \). Explain why.

This is a 30° angle because the compass was open to a little more than half of \( AB \).

Score 1: The student stated that the angle measures 30°, but the explanation is incorrect.
Question 29

29 Using the construction below, state the degree measure of \( \angle CAD \). Explain why.

\[ \text{It's an equalateral triangle} \]
\[ \text{So } \angle A, \angle C \text{ and } \angle B \text{ is } 60. \]

Score 1: The student stated that the angle measures 30°, but the explanation is incomplete.
29 Using the construction below, state the degree measure of \( \angle CAD \). Explain why.

\[
60^\circ. \text{ It is an equilateral triangle so all } \angle \text{s } = 60^\circ.
\]

**Score 1:** The student wrote an incomplete response.
29 Using the construction below, state the degree measure of \( \angle CAD \). Explain why.

\[ \angle CAD \text{ is } 45^\circ \text{ because } \triangle CAD \]

\[ \text{is a } 45^\circ, 45^\circ, 90^\circ \text{ triangle} \]

**Score 0:** The student gave a completely incorrect response.
In the diagram below of circle $K$, secant $\overline{PLKE}$ and tangent $\overline{PZ}$ are drawn from external point $P$.

If $m\angle LZ = 56^\circ$, determine and state the degree measure of angle $P$.

$m\angle P = \frac{1}{2} (m\angle LZ - m\angle KEZ)$

$m\angle P = \frac{1}{2} (124 - 56)$

$m\angle P = \frac{1}{2} (68)$

$m\angle P = 34$

**Score 2:** The student gave a complete and correct response.
30 In the diagram below of circle $K$, secant $\overline{PLKE}$ and tangent $\overline{PZ}$ are drawn from external point $P$.

If $m\angle LZ = 56^\circ$, determine and state the degree measure of angle $P$.

\[
P = \frac{1}{2} (124 - 56) \\
P = \frac{1}{2} (68) \\
\therefore P = 34^\circ \quad m\angle P = 34^\circ
\]

Score 2: The student gave a complete and correct response.
30 In the diagram below of circle $K$, secant $PLKE$ and tangent $PZ$ are drawn from external point $P$.

If $m\angle Z = 56^\circ$, determine and state the degree measure of angle $P$.

Score 2: The student gave a complete and correct response.

\[ V = 160 \text{ ft}^3 \]

**Score 0:** The student did not show enough correct relevant work to receive any credit.
32 Triangle $ABC$ is shown below. Using a compass and straightedge, construct the dilation of $\triangle ABC$ centered at $B$ with a scale factor of 2. [Leave all construction marks.]

Is the image of $\triangle ABC$ similar to the original triangle? Explain why.

Yes, $\triangle A'B'C'$ is similar to $\triangle ABC$!

A dilation of 2 means that all sides are multiplied by 2!

*Similar $\triangle$'s have side lengths that are in proportion.*

Score 4: The student gave a complete and correct response.
32. Triangle $ABC$ is shown below. Using a compass and straightedge, construct the dilation of $\triangle ABC$ centered at $B$ with a scale factor of 2. [Leave all construction marks.]

Is the image of $\triangle ABC$ similar to the original triangle? Explain why.

The image of $\triangle ABC$ is similar to the triangle because since a dilation isn’t a rigid motion, it preserves the angle measures but creates proportional side lengths. Similar triangles have congruent angles and proportional side lengths, meaning that a dilation creates an image similar to the original triangle.

Score 4: The student gave a complete and correct response.
32 Triangle $ABC$ is shown below. Using a compass and straightedge, construct the dilation of $\triangle ABC$ centered at $B$ with a scale factor of 2.
[Leave all construction marks.]

Is the image of $\triangle ABC$ similar to the original triangle? Explain why.

Yes because a dilation preserves angle measure, so this could be similar by the AA~ postulate.

Score 4: The student gave a complete and correct response.
32 Triangle $ABC$ is shown below. Using a compass and straightedge, construct the dilation of $\triangle ABC$ centered at $B$ with a scale factor of 2.
[Leave all construction marks.]

Is the image of $\triangle ABC$ similar to the original triangle? Explain why.

**Yes because a dilation is not isometric, it doesn't change sides. Also, the sides would be proportional.**

**Score 3:** The student wrote a partially incorrect explanation by stating that the dilation doesn't change the sides.
Triangle $ABC$ is shown below. Using a compass and straightedge, construct the dilation of $\triangle ABC$ centered at $B$ with a scale factor of 2.

[Leave all construction marks.]

Is the image of $\triangle ABC$ similar to the original triangle? Explain why.

**Score 2:** The student made a correct construction, but no further correct work was shown.
32 Triangle $ABC$ is shown below. Using a compass and straightedge, construct the dilation of $\triangle ABC$ centered at $B$ with a scale factor of 2.
[Leave all construction marks.]

Is the image of $\triangle ABC$ similar to the original triangle? Explain why.

$\triangle ABC$ is similar to $\triangle A'B'C'$ because dilations preserve shape.

**Score 1:** The student made an appropriate construction centered at a point other than $B$.
The student wrote an incorrect explanation.
Triangle $ABC$ is shown below. Using a compass and straightedge, construct the dilation of $\triangle ABC$ centered at $B$ with a scale factor of 2. [Leave all construction marks.]

Is the image of $\triangle ABC$ similar to the original triangle? Explain why.

No. Dilation is the only rigid motion that does not preserve size of a image. This transformation does not lead the triangle to be similar or remain the same as the original triangle.

Score 0: The student gave a completely incorrect response.

\[ V = 34 \times 6.5 \]
\[ V = 221 \text{ ft}^3 \]

The volume of the trailer is 221 ft\(^3\).

**Score 0:** The student gave a completely incorrect response.
35 The coordinates of the vertices of $\triangle ABC$ are $A(1,2)$, $B(-5,3)$, and $C(-6,-3)$.

Prove that $\triangle ABC$ is isosceles.
[The use of the set of axes on the next page is optional.]

$$AB = \sqrt{(-5-1)^2 + (3-2)^2} = \sqrt{37}$$

$$BC = \sqrt{(-6-5)^2 + (-3-3)^2} = \sqrt{84}$$

$\triangle ABC$ is isosceles b/c $AB = BC$

State the coordinates of point $D$ such that quadrilateral $ABCD$ is a square.

$$(0, -4)$$

Score 6: The student gave a complete and correct response.
Prove that your quadrilateral $ABCD$ is a square.

[The use of the set of axes below is optional.]

\[ AD = \sqrt{1^2 + (1-1)^2} = \sqrt{1} \]
\[ CD = \sqrt{(6-0)^2 + (-3-4)^2} = \sqrt{137} \]

Slope of $AB = \frac{\frac{3}{2} - \frac{3}{2}}{-5-1} = \frac{-1}{6}$
\[ CB = \frac{\frac{3}{2} - \frac{-3}{2}}{-5-6} = \frac{6}{11} \]

$ABCD$ is a square b/c all 4 sides are $\approx$ and consecutive sides are $\perp$ since their slopes are opp. signed reciprocals, so $CB$ is a right $\angle$. 
35 The coordinates of the vertices of \( \triangle ABC \) are \( A(1,2), B(-5,3), \) and \( C(-6,-3) \).

Prove that \( \triangle ABC \) is isosceles.
[The use of the set of axes on the next page is optional.]

\[
\text{distance from } A \text{ to } B = \sqrt{(1-5)^2 + (2-3)^2} = \sqrt{16 + 1} = \sqrt{17} \\
\text{distance from } B \text{ to } C = \sqrt{(-6-5)^2 + (-3-3)^2} = \sqrt{11 + 36} = \sqrt{47} \\
\text{Since there are two congruent sides, } \triangle ABC \text{ is isosceles.}
\]

State the coordinates of point \( D \) such that quadrilateral \( ABCD \) is a square.

\[ D = (0, -4) \]

**Score 5:** The student did not write the concluding statement when proving the square.
Prove that your quadrilateral $ABCD$ is a square.
[The use of the set of axes below is optional.]

\[
\begin{align*}
\overline{AB} &= \sqrt{37} \\
\overline{BC} &= \sqrt{37} \\
\overline{CD} &= \sqrt{37} \\
\overline{DA} &= \sqrt{37} \\
\angle BAD &= 90^\circ \\
\angle ADC &= 90^\circ \\
\end{align*}
\]

(slopes are negative reciprocals, making them perpendicular)
Question 35

35 The coordinates of the vertices of \( \triangle ABC \) are \( A(1,2) \), \( B(-5,3) \), and \( C(-6,-3) \).

Prove that \( \triangle ABC \) is isosceles.
[The use of the set of axes on the next page is optional.]

\[
\begin{align*}
\overline{AB} & = d = \sqrt{(5-1)^2 + (3-2)^2} \\
& = \sqrt{36 + 1} \\
& = \sqrt{37}
\end{align*}
\]

\[
\begin{align*}
\overline{BC} & = d = \sqrt{(6+5)^2 + (3-3)^2} \\
& = \sqrt{136} \\
& = \sqrt{37}
\end{align*}
\]

\( \overline{AB} \) and \( \overline{BC} \) are congruent so \( \triangle ABC \) is isosceles.

State the coordinates of point \( D \) such that quadrilateral \( ABCD \) is a square.

\( D(0,-4) \)

Score 4: The student made a conceptual error by stating that all sides with the same length is a square.
Prove that your quadrilateral $ABCD$ is a square.
[The use of the set of axes below is optional.]

$AB \approx d = \sqrt{37}$

$BC \approx d = \sqrt{37}$

$CD \approx d = \sqrt{(-6-0)^2 + (-3+4)^2}$

$d = \sqrt{316 + 1}$

$d = \sqrt{317}$

$DA \approx d = \sqrt{(0-1)^2 + (y-2)^2}$

$d = \sqrt{1 + 36}$

$d = \sqrt{37}$

All sides have the same length therefore it is a square.
35 The coordinates of the vertices of $\triangle ABC$ are $A(1,2)$, $B(-5,3)$, and $C(-6,-3)$.

Prove that $\triangle ABC$ is isosceles.
[The use of the set of axes on the next page is optional.]

\[
AB = \sqrt{(1-(-5))^2 + (2-3)^2} = \sqrt{(6)^2 + (-1)^2} = \sqrt{36+1} = \sqrt{37} \\
BC = \sqrt{(-5-(-6))^2 + (3-(-3))^2} = \sqrt{(1)^2 + (6)^2} = \sqrt{1+36} = \sqrt{37} \\
CA = \sqrt{(-6-1)^2 + (-3-2)^2} = \sqrt{(-7)^2 + (-5)^2} = \sqrt{49+25} = \sqrt{74}
\]

$\therefore$ $\triangle ABC$ is isosceles b/c two sides are congruent

State the coordinates of point $D$ such that quadrilateral $ABCD$ is a square.

\((-1, -4)\)

Score 3: The student proved $\triangle ABC$ is isosceles. The student graphed points $C$ and $D$ incorrectly, which resulted in a quadrilateral that is not a square. The student made an appropriate concluding statement based on their work, but the level of difficulty was significantly reduced.
Prove that your quadrilateral $ABCD$ is a square.

[The use of the set of axes below is optional.]

\[
\begin{align*}
\overline{AB} &= \sqrt{(-6-(-1))² + (-3-(-4))²} = \sqrt{ (-5)^2 + (1)^2} = \sqrt{25 + 1} = \sqrt{26} \\
\overline{BC} &= \sqrt{(-4-(-1))² + (-1-(-3))²} = \sqrt{ (-3)^2 + (2)^2} = \sqrt{9 + 4} = \sqrt{13} \\
\overline{CD} &= \sqrt{(-2-(-4))² + (0-(-1))²} = \sqrt{ (-2)^2 + (1)^2} = \sqrt{4 + 1} = \sqrt{5} \\
\overline{DA} &= \sqrt{(0-(-3))² + (2-(-2))²} = \sqrt{ (3)^2 + (4)^2} = \sqrt{9 + 16} = \sqrt{25} = 5
\end{align*}
\]

\[\therefore \text{ Abcd is not a square }\]

\[\text{ b/c all sides are not congruent}\]
Question 35

35 The coordinates of the vertices of \( \triangle ABC \) are \( A(1,2) \), \( B(-5,3) \), and \( C(-6,-3) \).

Prove that \( \triangle ABC \) is isosceles.
[The use of the set of axes on the next page is optional.]

\[
\begin{align*}
\overline{AB} & = \sqrt{(1+5)^2 + (2-3)^2} = \sqrt{36 + 1} = \sqrt{37} \\
\overline{BC} & = \sqrt{(-5+6)^2 + (3+3)^2} = \sqrt{1 + 36} = \sqrt{37} \\
\overline{CA} & = \sqrt{(-1+6)^2 + (-3+3)^2} = \sqrt{25} = 5
\end{align*}
\]

\( \triangle ABC \) is isosceles because it has two \( \overline{AB} \) sides and one non-\( \overline{AB} \) side.

State the coordinates of point \( D \) such that quadrilateral \( ABCD \) is a square.

Score 3: The student proved \( \triangle ABC \) is isosceles, but one computational error was made. The coordinates of point \( D \) were not stated. In proving \( ABCD \) is a square, the student was missing the length of \( \overline{AD} \).
Prove that your quadrilateral $ABCD$ is a square. 
[The use of the set of axes below is optional.]

$$
\begin{align*}
\text{CD} & \quad d = \sqrt{(x_2-x_1)^2 + (y_2-y_1)^2} = \sqrt{6^2 + 6^2} = \sqrt{72} = \sqrt{36 \cdot 2} = \sqrt{38} \\
\text{CD} & \equiv \text{CD} \equiv \text{CD} \equiv \text{CD} \\
\sqrt{38} & = \sqrt{38} \neq \sqrt{38} \\
\end{align*}
$$

$$
\begin{align*}
\angle A & \equiv \angle B \equiv \angle C \equiv \angle D \\
\text{All sides are equal and have right angles.} \\
\end{align*}
$$
35 The coordinates of the vertices of $\triangle ABC$ are $A(1,2)$, $B(-5,3)$, and $C(-6,-3)$.

Prove that $\triangle ABC$ is isosceles.

[The use of the set of axes on the next page is optional.]

\[
\begin{align*}
AD &= \sqrt{(-5-1)^2 + (3-2)^2} = \sqrt{36+1} = \sqrt{37} \\
BC &= \sqrt{(-6+6)^2 + (3-3)^2} = \sqrt{1+0} = 1
\end{align*}
\]

Therefore $\triangle ABC$ is isosceles.

State the coordinates of point $D$ such that quadrilateral $ABCD$ is a square.

Score 2: The student proved $\triangle ABC$ is isosceles, but no further correct work was shown.
Prove that your quadrilateral $ABCD$ is a square.
[The use of the set of axes below is optional.]

\[ \sqrt{37} = \sqrt{(x-1)^2 + (y-2)^2} \]
Question 35

35 The coordinates of the vertices of \( \triangle ABC \) are \( A(1,2) \), \( B(-5,3) \), and \( C(-6,-3) \).

Prove that \( \triangle ABC \) is isosceles.
[The use of the set of axes on the next page is optional.]

\[
\begin{align*}
A(1,2) & \quad 2-3 & -1 & \quad -1^2 + 6^2 = \sqrt{37} \\
B(-5,3) & \quad 1-5 & -6 & \\
C(-6,-3) & \quad 3+3 & 0 & 6^2+1^2 = \sqrt{37} \\
C(-6,-3) & \quad -3+2 & \frac{5}{2} & -5^2+7^2 = \sqrt{74} \\
A(1,2) & \quad -6+1 & -7 & \\
\end{align*}
\]

\[ \therefore \text{\( \triangle ABC \) is isosceles because 2 sides are equal, they have similar slopes} \]

State the coordinates of point \( D \) such that quadrilateral \( ABCD \) is a square.

\[ D(0,-4) \]

**Score 2:** The student showed the appropriate work to prove \( \triangle ABC \) is isosceles, but the concluding statement included an incorrect phrase. The student stated the coordinates of point \( D \). The student did not show enough additional correct work to earn more credit.
Prove that your quadrilateral $ABCD$ is a square.

[The use of the set of axes below is optional.]

\[ \begin{align*}
  C(-6,-3) & \quad -3+4 = 1 \\
  D(0,4) & \quad -6-0 = -6 \\
  CD & \quad 4-2 = 2 \\
  DA & \quad 5-1 = -1
\end{align*} \]

\[ \text{Quad } A B C D \text{ is a square because all the slopes are equal.} \]
35 The coordinates of the vertices of \( \triangle ABC \) are \( A(1,2) \), \( B(-5,3) \), and \( C(-6,-3) \).

Prove that \( \triangle ABC \) is isosceles.

[The use of the set of axes on the next page is optional.]

\[
\text{Triangle } ABC \text{ is isosceles because the length of } \overline{BA} \text{ is equal to the length of } \overline{BC}
\]

State the coordinates of point \( D \) such that quadrilateral \( ABCD \) is a square.

\[
(0, -4)
\]

**Score 1:** The student stated the coordinates of point \( D \), but no further correct work was shown.
Prove that your quadrilateral $ABCD$ is a square.
[The use of the set of axes below is optional.]

quadrilateral $ABCD$ is a square because the distance from $AB, BC, CD, DA$ are the same and all angle meet to form $90^\circ$ angles.
35 The coordinates of the vertices of \( \triangle ABC \) are \( A(1,2), B(-5,3), \) and \( C(-6,-3). \)

Prove that \( \triangle ABC \) is isosceles.

[The use of the set of axes on the next page is optional.]

State the coordinates of point \( D \) such that quadrilateral \( ABCD \) is a square.

\[
\text{point } D = (0, -4)
\]

**Score 1:** The student stated the coordinates of point \( D \), but did not show enough correct work to earn additional credit.
Prove that your quadrilateral $ABCD$ is a square.

[The use of the set of axes below is optional.]
State the coordinates of point $D$ such that quadrilateral $ABCD$ is a square.

$$D = \sqrt{(y_2-y_1) \cdot (y_2-y_1)}$$

Prove that $\triangle ABC$ is isosceles.
[The use of the set of axes on the next page is optional.]

Score 0: The student did not show enough correct relevant work to receive any credit.
Prove that your quadrilateral $ABCD$ is a square.

[The use of the set of axes below is optional.]
Schools are not permitted to rescore any of the open-ended questions on this exam after each question has been rated once, regardless of the final exam score. Schools are required to ensure that the raw scores have been added correctly and that the resulting scale score has been determined accurately.

Because scale scores corresponding to raw scores in the conversion chart change from one administration to another, it is crucial that for each administration the conversion chart provided for that administration be used to determine the student’s final score. The chart above is usable only for this administration of the Regents Examination in Geometry.

To determine the student’s final examination score (scale score), find the student’s total test raw score in the column labeled “Raw Score” and then locate the scale score that corresponds to that raw score. The scale score is the student’s final examination score. Enter this score in the space labeled “Scale Score” on the student’s answer sheet.

Schools are not permitted to rescore any of the open-ended questions on this exam after each question has been rated once, regardless of the final exam score. Schools are required to ensure that the raw scores have been added correctly and that the resulting scale score has been determined accurately.
