The University of the State of New York

REGENTS HIGH SCHOOL EXAMINATION

INTEGRATED ALGEBRA

Thursday, June 18, 2015 — 9:15 a.m. to 12:15 p.m., only

Print your name and the name of your school on the lines above.

A separate answer sheet for Part I has been provided to you. Follow the instructions from the proctor for completing the student information on your answer sheet.

This examination has four parts, with a total of 39 questions. You must answer all questions in this examination. Record your answers to the Part I multiple-choice questions on the separate answer sheet. Write your answers to the questions in Parts II, III, and IV directly in this booklet. All work should be written in pen, except graphs and drawings, which should be done in pencil. Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc. The formulas that you may need to answer some questions in this examination are found at the end of the examination. This sheet is perforated so you may remove it from this booklet.

Scrap paper is not permitted for any part of this examination, but you may use the blank spaces in this booklet as scrap paper. A perforated sheet of scrap graph paper is provided at the end of this booklet for any question for which graphing may be helpful but is not required. You may remove this sheet from this booklet. Any work done on this sheet of scrap graph paper will not be scored.

When you have completed the examination, you must sign the statement printed at the end of the answer sheet, indicating that you had no unlawful knowledge of the questions or answers prior to the examination and that you have neither given nor received assistance in answering any of the questions during the examination. Your answer sheet cannot be accepted if you fail to sign this declaration.

Notice...
A graphing calculator and a straightedge (ruler) must be available for you to use while taking this examination.

DO NOT OPEN THIS EXAMINATION BOOKLET UNTIL THE SIGNAL IS GIVEN.
Part I

Answer all 30 questions in this part. Each correct answer will receive 2 credits. No partial credit will be allowed. For each question, write on the separate answer sheet the numeral preceding the word or expression that best completes the statement or answers the question. [60]

1 If $A = \{1,2,3,4,5,6,7,8\}$ and $B = \{2,4,6,8,10,12\}$, then the intersection of these two sets is

- (1) $\{10,12\}$
- (2) $\{1,3,5,7\}$
- (3) $\{2,4,6,8\}$
- (4) $\{1,2,3,4,5,6,7,8,10,12\}$

2 There are 4 students running for Student Government President. A survey was taken asking 100 students which candidate they would vote for in the election. The results are shown in the table below:

<table>
<thead>
<tr>
<th>Candidate’s Name</th>
<th>Number of Supporters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ashley</td>
<td>30</td>
</tr>
<tr>
<td>Britney</td>
<td>28</td>
</tr>
<tr>
<td>Lyshon</td>
<td>14</td>
</tr>
<tr>
<td>Walker</td>
<td>28</td>
</tr>
</tbody>
</table>

Based on the table, what is the probability that a student chosen at random will vote for Lyshon?

- (1) $\frac{3}{10}$
- (2) $\frac{7}{25}$
- (3) $\frac{7}{50}$
- (4) $\frac{43}{50}$
3 The graph of $y = x^2$ is shown below.

Which graph represents $y = 2x^2$?

(1)  

(2)  

(3)  

(4)
4 The local deli charges a fee for delivery. On Monday, they delivered two dozen bagels to an office at a total cost of $8. On Tuesday, three dozen bagels were delivered at a total cost of $11. Which system of equations could be used to find the cost of a dozen bagels, $b$, if the delivery fee is $f$?

(1) $b + 2f = 8$
(2) $2b + f = 8$
(3) $b + 3f = 11$
(4) $3b + f = 11$

5 Which inequality is shown in the graph below?

(1) $y \leq \frac{4}{3}x + 3$
(2) $y \geq \frac{4}{3}x + 3$
(3) $y \leq \frac{4}{3}x - 4$
(4) $y \geq \frac{4}{3}x - 4$

6 Which expression is equivalent to $81 - 16x^2$?

(1) $(9 - 8x)(9 + 8x)$
(2) $(9 - 8x)(9 + 2x)$
(3) $(9 - 4x)(9 + 4x)$
(4) $(9 - 4x)(9 - 4x)$
7 Which value of \( x \) is the solution of \( \frac{1}{5} + \frac{2}{x} = \frac{1}{3} \)?

(1) \(-2\frac{3}{4}\)  
(2) \(-15\)  
(3) \(2\frac{3}{4}\)  
(4) \(15\)

8 The product of a number and 3, increased by 5, is 7 less than twice the number. Which equation can be used to find this number, \( n \)?

(1) \(3n + 5 = 2n - 7\)  
(2) \(3n + 5 = 7 - 2n\)  
(3) \(3(n + 5) = 2n - 7\)  
(4) \(3(n + 5) = 7 - 2n\)

9 Which linear equation represents a line that has a slope of \( \frac{2}{3} \)?

(1) \(-2y = -3x + 6\)  
(2) \(-3y = 2x + 6\)  
(3) \(3y = -2x + 6\)  
(4) \(3y = 2x + 6\)

10 Which situation is an example of bivariate data?

(1) shoe sizes of a tennis team  
(2) goals scored in soccer games  
(3) Calories consumed in one day  
(4) hours studying compared to test scores

11 What is the solution of the following system of equations?

\[
\begin{align*}
2a + 3b &= 12 \\
a &= \frac{1}{2}b - 6
\end{align*}
\]

(1) \(a = -6\) and \(b = 0\)  
(2) \(a = -4.5\) and \(b = 3\)  
(3) \(a = -3\) and \(b = 6\)  
(4) \(a = 24\) and \(b = 6\)
12 Which statement is true about the data shown in the scatter plot below?

(1) There is no correlation between the two sets of data.
(2) There is a positive correlation between the two sets of data.
(3) There is a negative correlation between the two sets of data.
(4) The correlation between the data is both positive and negative.

13 The graph of the equation \( y = -2 \) is a line

(1) parallel to the \( x \)-axis
(2) parallel to the \( y \)-axis
(3) passing through the origin
(4) passing through the point \((-2,0)\)

14 The base of a closed right circular cylinder has a diameter of 5 cm. If the height of the cylinder is 8 cm, what is the surface area of the cylinder, to the nearest square centimeter?

(1) 157
(2) 165
(3) 408
(4) 628

15 Which equation represents the line that passes through the points \((-1,-2)\) and \((3,10)\)?

(1) \( y = 3x + 1 \)
(2) \( y = 3x - 1 \)
(3) \( y = 4x + 2 \)
(4) \( y = 4x - 2 \)
16 As shown in the diagram below, a building casts a 72-foot shadow on the ground when the angle of elevation of the Sun is 40°.

\[ \text{How tall is the building, to the nearest foot?} \]

(1) 46  (3) 86
(2) 60  (4) 94

17 Which value of \( x \) is a solution of the inequality \( 25x - 100 < 250 \)?

(1) 13  (3) 15
(2) 14  (4) 16

18 The square of a positive number is 24 more than 5 times the number. What is the value of the number?

(1) 6  (3) 3
(2) 8  (4) 4

19 Owino gets paid $280 per week plus 5% commission on all sales for selling electronic equipment. If he sells \( n \) dollars worth of electronic equipment in one week, which algebraic expression represents the amount of money he will earn that week?

(1) \( 280n + 5 \)  (3) \( 280 + 0.05n \)
(2) \( 280n + 0.05 \)  (4) \( 280 + 5n \)
20 Which value of $x$ makes the expression $\frac{x + 9}{3x - 6}$ undefined?

(1) $-9$  (3) $-3$
(2) $2$  (4) $0$

21 A total of 1680 ounces of pet food have to be packed in 5-pound bags. How many 5-pound bags of pet food can be packed?

$1$ pound $= 16$ ounces

(1) $21$  (3) $105$
(2) $28$  (4) $336$

22 For a class of students, which data set could be classified as qualitative?

(1) political opinions  (3) weights
(2) heights  (4) ages

23 In right triangle $EFD$, $ED = 11$, $EF = 6$, and $\angle F = 90$. What is the measure of angle $E$, to the nearest degree?

(1) $61$  (3) $33$
(2) $57$  (4) $29$

24 If $z + y = x + xy^2$, what is $x$ expressed in terms of $y$ and $z$?

(1) $\frac{z}{y}$  (3) $\frac{z + 1}{y}$
(2) $\frac{z}{1 + y}$  (4) $\frac{z + y}{1 + y^2}$
25 Mrs. Porter recorded her students’ grades in the frequency table below.

<table>
<thead>
<tr>
<th>Score</th>
<th>Frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>96</td>
<td>2</td>
</tr>
<tr>
<td>92</td>
<td>5</td>
</tr>
<tr>
<td>88</td>
<td>3</td>
</tr>
<tr>
<td>84</td>
<td>2</td>
</tr>
<tr>
<td>78</td>
<td>4</td>
</tr>
<tr>
<td>60</td>
<td>1</td>
</tr>
</tbody>
</table>

Which statement is true for the data?
(1) mean > median > mode  (3) mode > median > mean
(2) mean > mode > median  (4) median > mean > mode

26 The equation \((x - 6)(8 + x) = (x - 6)\cdot(8) + (x - 6)\cdot(x)\) illustrates the use of which property?
(1) distributive property
(2) associative property of addition
(3) associative property of multiplication
(4) commutative property of multiplication

27 If \((7.6 \times 10^n)(3.5 \times 10^3) = 2.66 \times 10^9\), what is the value of \(n\)?
(1) 6  (3) 3
(2) 5  (4) 7

28 Which value is equivalent to the product of \(4\sqrt{2}\) and \(2\sqrt{6}\)?
(1) \(16\sqrt{3}\)  (3) \(6\sqrt{8}\)
(2) \(6\sqrt{12}\)  (4) \(24\sqrt{2}\)
29 The set of integers in \([6,10)\) can be written as

(1) \{6, 7, 8, 9, 10\}  
(2) \{7, 8, 9, 10\}  
(3) \{6, 7, 8, 9\}  
(4) \{7, 8, 9\}

30 A rectangular tank measures 5 feet long, 4 feet wide, and 3 feet high. Water is poured into the tank to a depth of \(2\frac{1}{2}\) feet. How many cubic feet of water are in the tank?

(1) 60  
(2) 50  
(3) 15.5  
(4) 11.5
Part II

Answer all 3 questions in this part. Each correct answer will receive 2 credits. Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc. For all questions in this part, a correct numerical answer with no work shown will receive only 1 credit. All answers should be written in pen, except for graphs and drawings, which should be done in pencil. [6]

31 Jen traveled a distance of 170 miles in 2 hours and 45 minutes. Express her speed, in miles per hour, to the nearest tenth.
As shown below, polygon ABCGFED consists of two squares, ABCD and CGFE, and an equilateral triangle CED. The length of $BC$ is $\sqrt{3}$ cm. Determine the perimeter of polygon ABCGFED in radical form.
33 Write a quadratic equation in standard form that has roots of $-12$ and 2.
Part III

Answer all 3 questions in this part. Each correct answer will receive 3 credits. Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc. For all questions in this part, a correct numerical answer with no work shown will receive only 1 credit. All answers should be written in pen, except for graphs and drawings, which should be done in pencil. [9]

34 Find algebraically the equation of the axis of symmetry and the vertex of the parabola represented by the equation \( y = -x^2 - 2x + 1 \).
Linda measures her rectangular bedroom window for a new shade. The measurements she made are 36 inches by 42 inches. The actual measurements of the window are 36.5 inches and 42.5 inches. Determine the relative error in calculating the area. Express your answer as a decimal to the nearest thousandth.
The following set of data represents the heights, in inches, of the 20 students in Ms. Fitzgerald’s freshman class:

63, 56, 67, 59, 70, 69, 62, 74, 66, 72
67, 60, 70, 66, 67, 58, 68, 72, 63, 67

Complete the frequency table below.

<table>
<thead>
<tr>
<th>Interval</th>
<th>Tally</th>
<th>Frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>55–59</td>
<td></td>
<td></td>
</tr>
<tr>
<td>60–64</td>
<td></td>
<td></td>
</tr>
<tr>
<td>65–69</td>
<td></td>
<td></td>
</tr>
<tr>
<td>70–74</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

On the grid below, draw and label a frequency histogram for these data.
37 On the set of axes below, graph \( y = 2x^2 - 4x - 6 \).

State the roots of \( 0 = 2x^2 - 4x - 6 \).
The length of a rectangle is represented by \( x^2 + 3x + 2 \), and the width is represented by \( 4x \).

Express the perimeter of the rectangle as a trinomial.

Express the area of the rectangle as a trinomial.
Tony makes a phone call at a pay phone. The charge is 25 cents for the first four minutes, and 10 cents for each additional minute. Tony has $2.10 in change in his pocket. Write an inequality that can be used to find \( m \), the maximum number of minutes that Tony can talk on the phone.

Solve this inequality algebraically to find the maximum number of whole minutes he can talk on the phone.
Scrap Graph Paper — This sheet will not be scored.
## Reference Sheet

### Trigonometric Ratios

- **Sine (sin A):** \( \sin A = \frac{\text{opposite}}{\text{hypotenuse}} \)
- **Cosine (cos A):** \( \cos A = \frac{\text{adjacent}}{\text{hypotenuse}} \)
- **Tangent (tan A):** \( \tan A = \frac{\text{opposite}}{\text{adjacent}} \)

### Area

- **Trapezoid**: \( A = \frac{1}{2}h(b_1 + b_2) \)

### Volume

- **Cylinder**: \( V = \pi r^2 h \)

### Surface Area

- **Rectangular Prism**: \( \text{SA} = 2lw + 2hw + 2lh \)
- **Cylinder**: \( \text{SA} = 2\pi r^2 + 2\pi rh \)

### Coordinate Geometry

- **Slope (m)**: \( m = \frac{\Delta y}{\Delta x} = \frac{y_2 - y_1}{x_2 - x_1} \)
Mechanics of Rating

The following procedures are to be followed for scoring student answer papers for the Regents Examination in Integrated Algebra. More detailed information about scoring is provided in the publication Information Booklet for Scoring the Regents Examinations in Mathematics.

Do not attempt to correct the student’s work by making insertions or changes of any kind. In scoring the open-ended questions, use check marks to indicate student errors. Unless otherwise specified, mathematically correct variations in the answers will be allowed. Units need not be given when the wording of the questions allows such omissions.

Each student’s answer paper is to be scored by a minimum of three mathematics teachers. No one teacher is to score more than approximately one-third of the open-ended questions on a student’s paper. Teachers may not score their own students’ answer papers. On the student’s separate answer sheet, for each question, record the number of credits earned and the teacher’s assigned rater/scorer letter.

Schools are not permitted to rescore any of the open-ended questions on this exam after each question has been rated once, regardless of the final exam score. Schools are required to ensure that the raw scores have been added correctly and that the resulting scale score has been determined accurately.

Raters should record the student’s scores for all questions and the total raw score on the student’s separate answer sheet. Then the student’s total raw score should be converted to a scale score by using the conversion chart that will be posted on the Department’s web site at: http://www.p12.nysed.gov/assessment/ on Thursday, June 18, 2015. Because scale scores corresponding to raw scores in the conversion chart may change from one administration to another, it is crucial that, for each administration, the conversion chart provided for that administration be used to determine the student’s final score. The student’s scale score should be entered in the box provided on the student’s separate answer sheet. The scale score is the student’s final examination score.
If the student’s responses for the multiple-choice questions are being hand scored prior to being scanned, the scorer must be careful not to make any marks on the answer sheet except to record the scores in the designated score boxes. Marks elsewhere on the answer sheet will interfere with the accuracy of the scanning.

Part I

Allow a total of 60 credits, 2 credits for each of the following.

<p>| | | | |</p>

Updated information regarding the rating of this examination may be posted on the New York State Education Department’s web site during the rating period. Check this web site at: http://www.p12.nysed.gov/assessment/ and select the link “Scoring Information” for any recently posted information regarding this examination. This site should be checked before the rating process for this examination begins and several times throughout the Regents Examination period.

Beginning in January 2013, the Department is providing supplemental scoring guidance, the “Sample Response Set,” for the Regents Examination in Integrated Algebra. This guidance is not required as part of the scorer training. It is at the school’s discretion to incorporate it into the scorer training or to use it as supplemental information during scoring. While not reflective of all scenarios, the sample student responses selected for the Sample Response Set illustrate how less common student responses to open-ended questions may be scored. The Sample Response Set will be available on the Department’s web site at http://www.nysedregents.org/IntegratedAlgebra/.
General Rules for Applying Mathematics Rubrics

I. General Principles for Rating

The rubrics for the constructed-response questions on the Regents Examination in Integrated Algebra are designed to provide a systematic, consistent method for awarding credit. The rubrics are not to be considered all-inclusive; it is impossible to anticipate all the different methods that students might use to solve a given problem. Each response must be rated carefully using the teacher’s professional judgment and knowledge of mathematics; all calculations must be checked. The specific rubrics for each question must be applied consistently to all responses. In cases that are not specifically addressed in the rubrics, raters must follow the general rating guidelines in the publication Information Booklet for Scoring the Regents Examinations in Mathematics, use their own professional judgment, confer with other mathematics teachers, and/or contact the State Education Department for guidance. During each Regents Examination administration period, rating questions may be referred directly to the Education Department. The contact numbers are sent to all schools before each administration period.

II. Full-Credit Responses

A full-credit response provides a complete and correct answer to all parts of the question. Sufficient work is shown to enable the rater to determine how the student arrived at the correct answer.

When the rubric for the full-credit response includes one or more examples of an acceptable method for solving the question (usually introduced by the phrase “such as”), it does not mean that there are no additional acceptable methods of arriving at the correct answer. Unless otherwise specified, mathematically correct alternative solutions should be awarded credit. The only exceptions are those questions that specify the type of solution that must be used; e.g., an algebraic solution or a graphic solution. A correct solution using a method other than the one specified is awarded half the credit of a correct solution using the specified method.

III. Appropriate Work

Full-Credit Responses: The directions in the examination booklet for all the constructed-response questions state: “Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc.” The student has the responsibility of providing the correct answer and showing how that answer was obtained. The student must “construct” the response; the teacher should not have to search through a group of seemingly random calculations scribbled on the student paper to ascertain what method the student may have used.

Responses With Errors: Rubrics that state “Appropriate work is shown, but…” are intended to be used with solutions that show an essentially complete response to the question but contain certain types of errors, whether computational, rounding, graphing, or conceptual. If the response is incomplete; i.e., an equation is written but not solved or an equation is solved but not all of the parts of the question are answered, appropriate work has not been shown. Other rubrics address incomplete responses.

IV. Multiple Errors

Computational Errors, Graphing Errors, and Rounding Errors: Each of these types of errors results in a 1-credit deduction. Any combination of two of these types of errors results in a 2-credit deduction. No more than 2 credits should be deducted for such mechanical errors in any response. The teacher must carefully review the student’s work to determine what errors were made and what type of errors they were.

Conceptual Errors: A conceptual error involves a more serious lack of knowledge or procedure. Examples of conceptual errors include using the incorrect formula for the area of a figure, choosing the incorrect trigonometric function, or multiplying the exponents instead of adding them when multiplying terms with exponents. A response with one conceptual error can receive no more than half credit.

If a response shows repeated occurrences of the same conceptual error, the student should not be penalized twice. If the same conceptual error is repeated in responses to other questions, credit should be deducted in each response.

If a response shows two (or more) different major conceptual errors, it should be considered completely incorrect and receive no credit.

If a response shows one conceptual error and one computational, graphing, or rounding error, the teacher must award credit that takes into account both errors; i.e., awarding half credit for the conceptual error and deducting 1 credit for each mechanical error (maximum of two deductions for mechanical errors).
Part II

For each question, use the specific criteria to award a maximum of 2 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(31)  

[2] 61.8, and correct work is shown.

[1] An appropriate expression is shown, but one computational or rounding error is made.

or

[1] An appropriate expression is shown, but one conceptual error is made.

or

[1] $\frac{170}{5} \quad or \quad \frac{3}{4}$ or an equivalent expression, but no further correct work is shown.

or

[1] 61.8, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

(32)  

[2] $7\sqrt{3}$ and correct work is shown, such as a labeled diagram.

[1] Appropriate work is shown, but one computational error is made. An appropriate perimeter is found.

or

[1] Appropriate work is shown, but one conceptual error is made. An appropriate perimeter is found.

or

[1] Appropriate work is shown, but the perimeter is expressed as a decimal.

or

[1] $7\sqrt{3}$, but not work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
(33)  
\[ x^2 + 10x - 24 = 0, \text{ and correct work is shown.} \]

[1] Appropriate work is shown, but one computational error is made. An appropriate quadratic equation is written.

\textit{or}

[1] Appropriate work is shown, but one conceptual error is made, such as writing the expression \( x^2 + 10x - 24 \).

\textit{or}

[1] \((x + 12)(x - 2) = 0\), but no further correct work is shown.

\textit{or}

[1] \(x^2 + 10x - 24 = 0\), but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
Part III

For each question, use the specific criteria to award a maximum of 3 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(34) [3] $x = -1$ and $(-1,2)$ or equivalent, and correct algebraic work is shown.

[2] Appropriate work is shown, but one computational error is made.

or

[2] Appropriate work is shown to find $(-1,2)$, but the axis of symmetry is not stated or is stated incorrectly.

[1] Appropriate work is shown, but two or more computational errors are made.

or

[1] Appropriate work is shown, but one conceptual error is made.

or

[1] Appropriate work is shown to find $x = -1$, but no further correct work is shown.

or

[1] $x = -1$ and $(-1,2)$, but a method other than algebraic is used.

or

[1] $x = -1$ and $(-1,2)$, but no work is shown.

[0] $x = -1$ or $(-1,2)$, but no work is shown.

or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
[3] 0.025 and correct work is shown.

[2] Appropriate work is shown, but one computational or rounding error is made. An appropriate answer is found.

   or

[2] \( \frac{39.25}{1551.25} \) is written, but no further correct work is shown.

[1] Appropriate work is shown, but two or more computational errors are made. An appropriate answer is found.

   or

[1] Appropriate work is shown, but one conceptual error is made. An appropriate answer is found.

   or

[1] \( \frac{1551.25 - 1512}{1551.25} \) is written, but no further correct work is shown.

   or

[1] 0.025, but no work is shown.

[0] Appropriate work is shown to find 1512 and 1551.25, but no further correct work is shown.

   or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
[3] The frequency table is completed correctly, and a correct frequency histogram is drawn and labeled.

[2] The frequency table is completed correctly, but one graphing or labeling error is made.

or

[2] An incorrect frequency table is shown, but an appropriate frequency histogram is drawn and labeled.

[1] The frequency table is completed correctly, but two or more graphing or labeling errors are made.

or

[1] Appropriate work is shown, but one conceptual error is made, such as drawing a bar graph.

or

[1] The frequency table is completed correctly, but no further correct work is shown.

or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
Part IV

For each question, use the specific criteria to award a maximum of 4 credits. Unless otherwise specified, mathematically correct alternative solutions should be awarded appropriate credit.

(37) [4] A correct graph is drawn and −1 and 3 are stated.

[3] One graphing error is made. Appropriate roots are stated.

or

[3] A correct graph is drawn, but only −1 or 3 is stated.

or

[3] A correct graph is drawn, but the roots are expressed as the coordinates (−1,0) and (3,0).

[2] Two or more graphing errors are made. Appropriate roots are stated.

or

[2] Appropriate work is shown, but one conceptual error is made. Appropriate roots are stated.

or

[2] Appropriate work is shown to find −1 and 3, but no graph is drawn.

or

[2] A correct graph is drawn, but no further correct work is shown.

[1] Two or more graphing errors are made and roots are stated incorrectly or not stated.

or

[1] Appropriate work is shown, but one conceptual error and one graphing error are made. Appropriate roots are stated.

or

[1] −1 and 3 are stated, but no graph or work is shown.

[0] (−1,0) and (3,0) are stated, but no graph is drawn.

or

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
[4] Perimeter $2x^2 + 14x + 4$ and area $4x^3 + 12x^2 + 8x$, and correct work is shown.

[3] Appropriate work is shown, but one computational error is made.

or

[2] Appropriate work is shown but two or more computational errors are made.

or

[2] Appropriate work is shown, but one conceptual error is made.

or

[2] Appropriate work is shown to find either perimeter $2x^2 + 14x + 4$ or area $4x^3 + 12x^2 + 8x$.

[1] Appropriate work is shown, but one conceptual error and one computational error are made.

or

[1] Perimeter $2x^2 + 14x + 4$ and area $4x^3 + 12x^2 + 8x$, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.
(39) \[ 0.25 + 0.10(m - 4) \leq 2.10 \] or an equivalent is written, and 22, and correct work is shown.

[3] A correct inequality is written, but one computational error is made. An appropriate number of minutes is stated.

\[ \text{or} \]

[3] A correct inequality is written and solved to find \( m \leq 22.5 \), but no further correct work is shown.

[2] A correct inequality is written, but two or more computational errors are made.

\[ \text{or} \]

[2] Appropriate work is shown, but one conceptual error is made. An appropriate number of minutes is stated.

\[ \text{or} \]

[2] \( 0.25 + 0.10m \leq 2.10 \) is written, and 18, and appropriate work is shown.

\[ \text{or} \]

[2] A correct inequality is written, but no further correct work is shown.

\[ \text{or} \]

[2] 22, but a method other than algebraic is used.

[1] Appropriate work is shown, but one conceptual error and one computational error are made. An appropriate number of minutes is stated.

\[ \text{or} \]

[1] \( 0.25 + 0.10m \leq 2.10 \) is written and solved to find \( m \leq 18.5 \), but no further correct work is shown.

\[ \text{or} \]

[1] 22, but no work is shown.

[0] A zero response is completely incorrect, irrelevant, or incoherent or is a correct response that was obtained by an obviously incorrect procedure.

Regents Examination in Integrated Algebra
June 2015

Chart for Converting Total Test Raw Scores to
Final Examination Scores (Scale Scores)

The Chart for Determining the Final Examination Score for the June 2015 Regents Examination in Integrated Algebra will be posted on the Department’s web site at: http://www.p12.nysed.gov/assessment/ on Thursday, June 18, 2015. Conversion charts provided for previous administrations of the Regents Examination in Integrated Algebra must NOT be used to determine students’ final scores for this administration.

Online Submission of Teacher Evaluations of the Test to the Department

Suggestions and feedback from teachers provide an important contribution to the test development process. The Department provides an online evaluation form for State assessments. It contains spaces for teachers to respond to several specific questions and to make suggestions. Instructions for completing the evaluation form are as follows:

2. Select the test title.
3. Complete the required demographic fields.
4. Complete each evaluation question and provide comments in the space provided.
5. Click the SUBMIT button at the bottom of the page to submit the completed form.

Question 31

31 Jen traveled a distance of 170 miles in 2 hours and 45 minutes. Express her speed, in miles per hour, to the nearest tenth.

\[
\frac{170 \text{ miles}}{2 \text{ hr} 45 \text{ mins}} \rightarrow 61.81
\]

\[61.8\]

Score 2: The student has a complete and correct response.
31 Jen traveled a distance of 170 miles in 2 hours and 45 minutes. Express her speed, in miles per hour, to the nearest tenth.

\[
\frac{170}{165} \approx 1.030303 \\
(60) \Rightarrow 61.81 \\
61.8
\]

**Score 2:** The student has a complete and correct response.
31 Jen traveled a distance of 170 miles in 2 hours and 45 minutes. Express her speed, in miles per hour, to the nearest tenth.

\[
\frac{170}{2.75} = 61.818
\]

\[
= 61.82
\]

**Score 1:** The student made one error by rounding to the wrong decimal place.
31 Jen traveled a distance of 170 miles in 2 hours and 45 minutes. Express her speed, in miles per hour, to the nearest tenth.

\[
\frac{170}{2.45} \rightarrow 69.3877551
\]

**Score 0:** The student made one conceptual error and one rounding error.
31 Jen traveled a distance of 170 miles in 2 hours and 45 minutes. Express her speed, in miles per hour, to the nearest tenth.

\[ \frac{170}{165} = 1.0303 \]

\[ \approx 1.03 \]

**Score 0:** The student made one conceptual error by finding miles per minutes and did not round correctly.
32 As shown below, polygon $ABCGFED$ consists of two squares, $ABCD$ and $CGFE$, and an equilateral triangle $CED$. The length of $BC$ is $\sqrt{3}$ cm. Determine the perimeter of polygon $ABCGFED$ in radical form.

**Score 2:** The student has a complete and correct response.
32 As shown below, polygon $ABCGFED$ consists of two squares, $ABCD$ and $CGFE$, and an equilateral triangle $CED$. The length of $BC$ is $\sqrt{3}$ cm. Determine the perimeter of polygon $ABCGFED$ in radical form.

Score 2: The student expressed the perimeter as the product of the number of sides and the length of a side. The student then wrote a radical equivalent to $7\sqrt{3}$.
As shown below, polygon $ABCGFED$ consists of two squares, $ABCD$ and $CGFE$, and an equilateral triangle $CED$. The length of $BC$ is $\sqrt{3}$ cm. Determine the perimeter of polygon $ABCGFED$ in radical form.

Score 1: The student showed correct work to find $\sqrt{3} \times 7$, but identified the decimal as the answer.
32 As shown below, polygon ABCGFED consists of two squares, ABCD and CGFE, and an equilateral triangle CED. The length of $BC$ is $\sqrt{3}$ cm. Determine the perimeter of polygon ABCGFED in radical form.

Score 1: The student has the correct response, but no work is shown.
32 As shown below, polygon $ABCGFED$ consists of two squares, $ABCD$ and $CGFE$, and an equilateral triangle $CED$. The length of $BC$ is $\sqrt{3}$ cm. Determine the perimeter of polygon $ABCGFED$ in radical form.

\[
\sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} + \sqrt{3} = \sqrt{21}
\]

**Score 1:** The student showed appropriate work to find the perimeter, but made a conceptual error when adding the radicals.
32 As shown below, polygon $ABCGFED$ consists of two squares, $ABCD$ and $CGFE$, and an equilateral triangle $CED$. The length of $BC$ is $\sqrt{3}$ cm. Determine the perimeter of polygon $ABCGFED$ in radical form.

Score 1: The student made a conceptual error by including all the sides of the equilateral triangle when calculating the perimeter of polygon $ABCGFED$. 
32 As shown below, polygon $ABCGFED$ consists of two squares, $ABCD$ and $CGFE$, and an equilateral triangle $CED$. The length of $BC$ is $\sqrt{3}$ cm. Determine the perimeter of polygon $ABCGFED$ in radical form.

Score 0: The student made more than one error when finding the perimeter.
33 Write a quadratic equation in standard form that has roots of $-12$ and $2$.

\[(x+12)(x-2) = 0\]
\[x^2 + 10x - 24 = 0\]

Score 2: The student has a complete and correct response.
Question 33

33 Write a quadratic equation in standard form that has roots of $-12$ and $2$.

\[
\begin{align*}
\frac{x^2 + 10x - 24}{x + 12} &= \frac{x - 2}{x - 2} \\
(x + 12)(x - 2) &= 0 \\
x^2 - 2x + 12x &= 0 \\
-2a + 12x &= 0 \\
-2a &= 12x \\
x^2 + 10x - 24 &= 0 \\
\text{ans.}
\end{align*}
\]

Score 1: The student showed appropriate work, but wrote an expression instead of an equation.
33 Write a quadratic equation in standard form that has roots of $-12$ and $2$.

\[ (x+12)(x-2) = 0 \]

\[ x^2 + 10x - 24 = 0 \]

**Score 1:** The student wrote a correct equation in factored form but forgot “$x$” on the middle term when multiplying the factors.
33 Write a quadratic equation in standard form that has roots of $-12$ and $2$.

\[
\begin{align*}
\frac{x^2}{x+12} = \frac{x}{x+12} \\
(x+12)(x+2) = 0 \\
x^2 + 2x + 24 = 0 \\
x^2 + 14x + 24 = 0
\end{align*}
\]

**Score 1:** The student made an error in writing the second factor of the equation, but wrote an appropriate quadratic equation.
33 Write a quadratic equation in standard form that has roots of $-12$ and $2$.

\[ (x + 12)(x - 2) = 0 \]

\[ x = -12, \quad x = +2 \]

**Score 1:** The student wrote a correct equation in factored form, but showed no further correct work.
33 Write a quadratic equation in standard form that has roots of $-12$ and $2$.

\[
\begin{align*}
\text{x} &= -12 \\
\text{x} + 12 &= 0 \\
\text{x} &= 2 \\
\text{x} - 2 &= 0 \\
(x + 12) \cdot (x - 2) &= 0 \\
x^2 + 10x - 24 &= 0 \\
\end{align*}
\]

\[y = x^2 + 10x - 24\]

**Score 1:** The student showed appropriate work, but set the correct expression equal to $y$. 
33 Write a quadratic equation in standard form that has roots of \(-12\) and 2.

Score 0: The student wrote the expression \((x + 12)(x - 2)\), but showed no further correct work.
33 Write a quadratic equation in standard form that has roots of $-12$ and $2$.

\[
(x - 12)(x + 2) \\
= x^2 + 2x - 24 \\
= 12x \\
= x^2 - 15x - 24
\]

**Score 0:** The student wrote incorrect factors and did not write an equation.
Question 34

34 Find algebraically the equation of the axis of symmetry and the vertex of the parabola represented by the equation $y = -x^2 - 2x + 1$.

Score 3: The student has a complete and correct response.
Question 34

34 Find algebraically the equation of the axis of symmetry and the vertex of the parabola represented by the equation \( y = -x^2 - 2x + 1 \).

\[
\begin{align*}
x &= \frac{-(-2)}{-2} \\
x &= \frac{2}{2} = 1 \\
A \text{ of } &S; \quad x = 1 \\
\therefore y &= -1 - 2 + 1 \\
y &= -2 \\
(1, -2)
\end{align*}
\]

Score 2: The student made an error in finding the axis of symmetry, but found an appropriate vertex.
Question 34

34 Find algebraically the equation of the axis of symmetry and the vertex of the parabola represented by the equation $y = -x^2 - 2x + 1$.

\[
\begin{align*}
-\frac{b}{2a} &= -\frac{-2}{2} = 2 \\
&= -1 \\
&= -2 \\
y &= -(-1)^2 - 2(-1) + 1 = 2 \\
&= (-1, 2)
\end{align*}
\]

Score 2: The student showed appropriate work to find the vertex, but did not state the axis of symmetry correctly.
34 Find algebraically the equation of the axis of symmetry and the vertex of the parabola represented by the equation \( y = -x^2 - 2x + 1 \).

\[
\frac{-b}{2a} = \frac{-(-2)}{2(-1)} = \frac{2}{-2} = -1
\]

\[
y = -(-1)^2 - 2(-1) + 1
-1 + 2 + 1
1 + 1
2
\]

\[
\boxed{-1, 2}
\]

**Score 1:** The student forgot to write “x” in the equation for the axis of symmetry and did not write parentheses around the coordinates of the vertex.
34 Find algebraically the equation of the axis of symmetry and the vertex of the parabola represented by the equation \( y = -x^2 - 2x + 1 \).

\[
\begin{align*}
\text{Axis of Symmetry: } x &= -1 \\
\text{Vertex: } &(-1, a) \\
\text{used a TI}
\end{align*}
\]

**Score 1:** The student wrote a correct response, but showed no work.
34 Find algebraically the equation of the axis of symmetry and the vertex of the parabola represented by the equation $y = -x^2 - 2x + 1$.

\[
\begin{align*}
\text{axis of symmetry} & \quad \frac{-b}{2a} = \frac{2}{-2} = -1 \\
x &= -1
\end{align*}
\]

**Score 1:** The student showed appropriate work to find the axis of symmetry, but showed no further work.
34 Find algebraically the equation of the axis of symmetry and the vertex of the parabola represented by the equation \( y = -x^2 - 2x + 1 \).

\[-x^2 - 2x + 1 = 0\]
\[x^2 + 2x - 1 = 0\]
\[x^2 + 2x = 1\]
\[x(x + 2) = 1\]
\[x = 1 \quad \text{or} \quad x = -2\]

\[\text{(Axis)} \quad \text{(Vertex)}\]

**Score 0:** The work done by the student was completely incorrect.
35 Linda measures her rectangular bedroom window for a new shade. The measurements she made are 36 inches by 42 inches. The actual measurements of the window are 36.5 inches and 42.5 inches. Determine the relative error in calculating the area. Express your answer as a decimal to the nearest thousandth.

\[
\frac{1551.25 - 1512}{1551.25} = \frac{39.25}{1551.25} = 0.0253021757
\]

\[\text{relative error}\]

**Score 3:** The student has a complete and correct response.
Question 35

35 Linda measures her rectangular bedroom window for a new shade. The measurements she made are 36 inches by 42 inches. The actual measurements of the window are 36.5 inches and 42.5 inches. Determine the relative error in calculating the area. Express your answer as a decimal to the nearest thousandth.

\[
\frac{\text{MEasured} - \text{Actual}}{\text{Actual}} = \frac{36 \times 42 - 36.5 \times 42.5}{36.5 \times 42.5}
\]

\[
RE = \frac{1512 - 1551.5}{1551.5} = 0.025
\]

Score 3: The student has a complete and correct response.
Linda measures her rectangular bedroom window for a new shade. The measurements she made are 36 inches by 42 inches. The actual measurements of the window are 36.5 inches and 42.5 inches. Determine the relative error in calculating the area. Express your answer as a decimal to the nearest thousandth.

Score 2: The student rounded to the nearest hundredth instead of thousandth.
35 Linda measures her rectangular bedroom window for a new shade. The measurements she made are 36 inches by 42 inches. The actual measurements of the window are 36.5 inches and 42.5 inches. Determine the relative error in calculating the area. Express your answer as a decimal to the nearest thousandth.

\[
\frac{1.551.25 - 1512}{1.551.25} \times 100 = 2.530 \%
\]

Score 2: The student made an error by expressing the relative error as a percentage.
35 Linda measures her rectangular bedroom window for a new shade. The measurements she made are 36 inches by 42 inches. The actual measurements of the window are 36.5 inches and 42.5 inches. Determine the relative error in calculating the area. Express your answer as a decimal to the nearest thousandth.

Score 1: The student made a transcription error when finding the measured area and made a rounding error when finding the relative error.
35 Linda measures her rectangular bedroom window for a new shade. The measurements she made are 36 inches by 42 inches. The actual measurements of the window are 36.5 inches and 42.5 inches. Determine the relative error in calculating the area. Express your answer as a decimal to the nearest thousandth.

Score 1: The student made a conceptual error by finding the amount of error instead of the relative error.
Question 35

35 Linda measures her rectangular bedroom window for a new shade. The measurements she made are 36 inches by 42 inches. The actual measurements of the window are 36.5 inches and 42.5 inches. Determine the relative error in calculating the area. Express your answer as a decimal to the nearest thousandth.

\[
\text{Relative error} = \frac{\text{Actual Area} - \text{Linda's Area}}{\text{Linda's Area}}
\]

\[
\frac{1551.25 - 1512}{1512} = \frac{39.25}{1512} = 0.026
\]

Relative error = 0.026

Score 0: The student used an incorrect formula, divided incorrectly, and did not round to the correct decimal place.
Linda measures her rectangular bedroom window for a new shade. The measurements she made are 36 inches by 42 inches. The actual measurements of the window are 36.5 inches and 42.5 inches. Determine the relative error in calculating the area. Express your answer as a decimal to the nearest thousandth.

Score 0: The student found both areas correctly, but showed no further correct work.
36 The following set of data represents the heights, in inches, of the 20 students in Ms. Fitzgerald’s freshman class:

Score 0: The student made an error in completing the frequency table. The student drew a completely incorrect graph.
37 On the set of axes below, graph \( y = 2x^2 - 4x - 6 \).
State the roots of \( 0 = 2x^2 - 4x - 6 \).

Score 4: The student has complete and correct work.
37 On the set of axes below, graph $y = 2x^2 - 4x - 6$.

State the roots of $0 = 2x^2 - 4x - 6$.

Score 4: The student showed complete and correct work.
37 On the set of axes below, graph \( y = 2x^2 - 4x - 6 \).

State the roots of \( 0 = 2x^2 - 4x - 6 \).

Score 4: The student showed complete and correct work.
37 On the set of axes below, graph \( y = 2x^2 - 4x - 6 \).

State the roots of \( 0 = 2x^2 - 4x - 6 \).

\[ \text{Roots} \rightarrow (-1,0) \ (3,0) \]

Score 3: The student drew a correct graph, but expressed the roots as coordinates.
37 On the set of axes below, graph \( y = 2x^2 - 4x - 6 \).

State the roots of \( 0 = 2x^2 - 4x - 6 \).

Score 3: The student drew a correct graph, but stated only one root, 3.
37 On the set of axes below, graph \( y = 2x^2 - 4x - 6 \).
State the roots of \( 0 = 2x^2 - 4x - 6 \).

Score 3: The student made one graphing error when plotting the vertex, but stated the correct roots.
37 On the set of axes below, graph \( y = 2x^2 - 4x - 6 \).

State the roots of \( 0 = 2x^2 - 4x - 6 \).

**Score 2:** The student made one graphing error and stated the roots as coordinates.
37 On the set of axes below, graph \( y = 2x^2 - 4x - 6 \).
State the roots of \( 0 = 2x^2 - 4x - 6 \).

\[ y = -1 \text{ and } x = 3 \]

\[ 2(x^2 - 2x - 3) \]

Score 2: The student made one conceptual error by factoring out a 2 and graphing \( y = x^2 - 2x - 3 \). The student stated the appropriate roots.
37 On the set of axes below, graph \( y = 2x^2 - 4x - 6 \).
State the roots of \( 0 = 2x^2 - 4x - 6 \).

\[
\begin{align*}
2x^2 - 4x - 6 &= 0 \\
2(x^2 - 2 - 3) &= 0 \\
2(x - 3)(x + 1) &= 0
\end{align*}
\]

\((-3, 1)\)  

\[
\begin{array}{c|c|c|c}
\hline
x & 0 & 1 & 2 \\
\hline
y & -6 & -4 & -2 \\
\hline
\end{array}
\]

\[y = 2x^2 - 4x - 6\]

Score 2: The student drew a correct graph, but showed no further correct work.
Question 37

On the set of axes below, graph \( y = 2x^2 - 4x - 6 \).

State the roots of \( 0 = 2x^2 - 4x - 6 \).

\[ y = 2(x + 1)(x - 3) \]
\[ x + 1 = 0 \quad x - 3 = 0 \]
\[ -1 \quad 3 \]

\[ x = -1 \quad x = 3 \]

Score 2: The student showed appropriate work to find \(-1\) and \(3\), but did not draw a graph.
37 On the set of axes below, graph \( y = 2x^2 - 4x - 6 \).

State the roots of \( 0 = 2x^2 - 4x - 6 \).

\[
\begin{align*}
y &= 2(x + 1)(x - 3) \\
x + 1 &= 0 & \text{x - 3} &= 0 \\
-1 &= -1 & x &= 3 \\
x &= -1 & x &= 3 \\
(-1, 0) & \quad (3, 0)
\end{align*}
\]

**Score 1:** The student showed appropriate work to find \(-1\) and \(3\), but did not draw a graph and stated the roots as coordinates.
Question 37

37 On the set of axes below, graph \( y = 2x^2 - 4x - 6 \).

State the roots of \( 0 = 2x^2 - 4x - 6 \).

Score 0: The student stated \(-1, 0\) and \(3, 0\) and drew a completely incorrect graph.
Question 38

Express the perimeter of the rectangle as a trinomial.

Express the area of the rectangle as a trinomial.

Score 4: The student has a complete and correct solution.
38 The length of a rectangle is represented by \( x^2 + 3x + 2 \), and the width is represented by \( 4x \).

Express the perimeter of the rectangle as a trinomial.

Express the area of the rectangle as a trinomial.

Score 3: The student made one computational error when distributing.
38 The length of a rectangle is represented by \( x^2 + 3x + 2 \), and the width is represented by \( 4x \).

Express the perimeter of the rectangle as a trinomial.

\[
p = x^2 + 3x + 2 + 4x = x^2 + 7x + 2
\]

Express the area of the rectangle as a trinomial.

\[
A = b \cdot h \\
A = 4x(x^2 + 3x + 2) \\
A = 4x^3 + 12x^2 + 8x
\]

**Score 2:** The student made a conceptual error when finding the perimeter.
38 The length of a rectangle is represented by \( x^2 + 3x + 2 \), and the width is represented by \( 4x \).

Express the perimeter of the rectangle as a trinomial.

\[
\begin{align*}
\text{Perimeter } P &= 2l + 2w \\
&= 2(x^2 + 3x + 2) + 2(4x) \\
&= 2x^2 + 6x + 4 + 8x \\
&= 2x^2 + 14x + 4
\end{align*}
\]

Express the area of the rectangle as a trinomial.

**Score 2:** The student only found the perimeter correctly.
Question 38

38 The length of a rectangle is represented by \(x^2 + 3x + 2\), and the width is represented by \(4x\).

Express the perimeter of the rectangle as a trinomial.

\[\text{perimeter} : 4x + x^2 + 3x + 2 + 4x + x^2 + 3x + 2 = 2x^2 + 14x + 4\]

Express the area of the rectangle as a trinomial.

\[4x \cdot (x^2 + 3x + 2) = 4x^3 + 12x^2 + 8x\]

Score 2: The student correctly found the perimeter, but made a conceptual error in finding the area.
38 The length of a rectangle is represented by \( x^2 + 3x + 2 \), and the width is represented by \( 4x \).

Express the perimeter of the rectangle as a trinomial.

Express the area of the rectangle as a trinomial.

Score 1: The student correctly calculated the perimeter, but transcribed the circled answer incorrectly (the \( x \) has been left out). The student calculated the area incorrectly.
38 The length of a rectangle is represented by \(x^2 + 3x + 2\), and the width is represented by \(4x\).

Express the perimeter of the rectangle as a trinomial.

\[
\text{Perimeter} = 2 \cdot 2
\]

Express the area of the rectangle as a trinomial.

\[
\text{area} = 4x - 4x
\]

**Score 0:** The student showed no correct work.
Tony makes a phone call at a pay phone. The charge is 25 cents for the first four minutes, and 10 cents for each additional minute. Tony has $2.10 in change in his pocket. Write an inequality that can be used to find \( m \), the maximum number of minutes that Tony can talk on the phone.

\[
\frac{2.10}{0.25} \leq 8.4
\]

\[
0.10(m-4) \leq 1.85
\]

Solve this inequality algebraically to find the maximum number of whole minutes he can talk on the phone.

\[
\begin{align*}
m - 4 &\leq 18.5 \\
m &\leq 22.5
\end{align*}
\]

**Score 4:** The student has a complete and correct response.
Tony makes a phone call at a pay phone. The charge is 25 cents for the first four minutes, and 10 cents for each additional minute. Tony has $2.10 in change in his pocket. Write an inequality that can be used to find \( m \), the maximum number of minutes that Tony can talk on the phone.

\[
0.25 + 0.10(m - 4) = 2.10
\]

\[
0.25 + 10m - 40 \leq 2.10
\]

\[
10m - 15 \leq 2.10
\]

\[
10m \leq 22.5
\]

\[
m \leq 2.25
\]

Solve this inequality algebraically to find the maximum number of whole minutes he can talk on the phone.

\[
m = 2.2
\]

**Score 4:** The student has a complete and correct response.
Tony makes a phone call at a pay phone. The charge is 25 cents for the first four minutes, and 10 cents for each additional minute. Tony has $2.10 in change in his pocket. Write an inequality that can be used to find \( m \), the maximum number of minutes that Tony can talk on the phone.

\[
0.25 + 0.10(m - 4) \leq 2.10
\]

Solve this inequality algebraically to find the maximum number of whole minutes he can talk on the phone.

\[
0.25 + 0.10m - 0.4 \leq 2.10
\]

\[
0.10m - 0.15 \leq 2.10
\]

\[
0.10m \leq 2.25
\]

\[
m \leq 22.5
\]

Score 3: The student wrote the correct inequality and solved it to find \( m \leq 22.5 \). The student did not find the maximum number of whole minutes.
39 Tony makes a phone call at a pay phone. The charge is 25 cents for the first four minutes, and 10 cents for each additional minute. Tony has $2.10 in change in his pocket. Write an inequality that can be used to find \( m \), the maximum number of minutes that Tony can talk on the phone.

\[
0.25 + 0.10(m-4) \leq 2.10
\]

Solve this inequality algebraically to find the maximum number of whole minutes he can talk on the phone.

\[
0.10(m-4) \leq 2.35
\]

\[
\frac{0.10(m-4)}{0.10} \leq \frac{2.35}{0.10}
\]

\[
m-4 \leq 23.5
\]

\[
m \leq 27.5
\]

\[
m = 27
\]

**Score 3:** The student wrote a correct inequality, but made one computational error in solving it. The student found an appropriate maximum number of minutes.
Tony makes a phone call at a pay phone. The charge is 25 cents for the first four minutes, and 10 cents for each additional minute. Tony has $2.10 in change in his pocket. Write an inequality that can be used to find \( m \), the maximum number of minutes that Tony can talk on the phone.

\[
0.25(4) + 0.10x \leq 2.10
\]

Solve this inequality algebraically to find the maximum number of whole minutes he can talk on the phone.

\[
0.25(4) + 0.10x \leq 2.10
1 + 0.10x \leq 2.10
0.10x \leq 1.10
x \leq 11
\]

**Score 2:** The student made a conceptual error in writing the inequality, but solved it appropriately to find the maximum number of minutes.
39 Tony makes a phone call at a pay phone. The charge is 25 cents for the first four minutes, and 10 cents for each additional minute. Tony has $2.10 in change in his pocket. Write an inequality that can be used to find \( m \), the maximum number of minutes that Tony can talk on the phone.

\[ .25 + .10x \leq 2.10 \]

Solve this inequality algebraically to find the maximum number of whole minutes he can talk on the phone.

\[ \frac{.25 + .10x - .25}{.10} \leq \frac{2.10 - .25}{.10} \]

\[ x \leq 18.5 \]

Score 2: The student made a conceptual error in writing the inequality, but solved it appropriately to find the maximum number of minutes.
39 Tony makes a phone call at a pay phone. The charge is 25 cents for the first four minutes, and 10 cents for each additional minute. Tony has $2.10 in change in his pocket. Write an inequality that can be used to find $m$, the maximum number of minutes that Tony can talk on the phone.

\[ 0.25m + 0.10 \leq 2.10 \]

Solve this inequality algebraically to find the maximum number of whole minutes he can talk on the phone.

\[ \begin{align*}
0.35 &= 5 \text{ min} \\
0.45 &= 6 \text{ min} \\
0.55 &= 7 \text{ min} \\
0.65 &= 8 \text{ min} \\

x \geq 18.5
\]

**Score 0:** The student made more than one conceptual error.
Schools are not permitted to rescore any of the open-ended questions on this exam after each question has been rated once, regardless of the final exam score. Schools are required to ensure that the raw scores have been added correctly and that the resulting scale score has been determined accurately.

Because scale scores corresponding to raw scores in the conversion chart change from one administration to another, it is crucial that for each administration the conversion chart provided for that administration be used to determine the student's final score. The chart above is usable only for this administration of the Regents Examination in Integrated Algebra.
