REGENTS HIGH SCHOOL EXAMINATION

INTEGRATED ALGEBRA

Wednesday, January 26, 2011—1:15 to 4:15 p.m., only

Student Name: Steve Watson
School Name: International High School @ Prospect Heights

Print your name and the name of your school on the lines above. Then turn to the last page of this booklet, which is the answer sheet for Part I. Fold the last page along the perforations and, slowly and carefully, tear off the answer sheet. Then fill in the heading of your answer sheet.

This examination has four parts, with a total of 39 questions. You must answer all questions in this examination. Write your answers to the Part I multiple-choice questions on the separate answer sheet. Write your answers to the questions in Parts II, III, and IV directly in this booklet. All work should be written in pen, except graphs and drawings, which should be done in pencil. Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc.

The formulas that you may need to answer some questions in this examination are found at the end of the examination. This sheet is perforated so you may remove it from this booklet.

Scrap paper is not permitted for any part of this examination, but you may use the blank spaces in this booklet as scrap paper. A perforated sheet of scrap graph paper is provided at the end of this booklet for any question for which graphing may be helpful but is not required. You may remove this sheet from this booklet. Any work done on this sheet of scrap graph paper will not be scored.

When you have completed the examination, you must sign the statement printed at the end of the answer sheet, indicating that you had no unlawful knowledge of the questions or answers prior to the examination and that you have neither given nor received assistance in answering any of the questions during the examination. Your answer sheet cannot be accepted if you fail to sign this declaration.

Notice...
A graphing calculator and a straightedge (ruler) must be available for you to use while taking this examination.

The use of any communications device is strictly prohibited when taking this examination. If you use any communications device, no matter how briefly, your examination will be invalidated and no score will be calculated for you.

DO NOT OPEN THIS EXAMINATION BOOKLET UNTIL THE SIGNAL IS GIVEN.

31 Roberta needs ribbon for a craft project. The ribbon sells for $3.75 per yard. Find the cost in dollars, for 48 inches of the ribbon.

1 yard = 36 inches

\[
\frac{\text{inches}}{\text{cost}} = \frac{36}{3.75} = \frac{48}{x}
\]

(cross multiply) \[36x = 3.75 \times 48\]

\[36x = 180\]

\[x = \frac{180}{36}\]

\[x = 5\]

The cost of 48 inches of ribbon is $\boxed{5.00}$
The square dart board shown below has a side that measures 40 inches. The shaded portion in the center is a square whose side is 15 inches. A dart thrown at the board is equally likely to land on any point on the dartboard.

Find the probability that a dart hitting the board will not land in the shaded area.

The whole area is \((40)^2 = 1600\) sq inches.

The shaded area is \((15)^2 = 225\) sq inches.

The area not shaded is \(1600 - 225 = 1375\) sq in.

\[
\text{Probability (event)} = \frac{\# \text{favorable outcomes}}{\# \text{total outcomes}} = \frac{1375}{1600}

37 An oil company distributes oil in a metal can shaped like a cylinder that has an actual radius of 5.1 cm and a height of 15.1 cm. A worker incorrectly measured the radius as 5 cm and the height as 15 cm. Determine the relative error in calculating the surface area, to the nearest thousandth.

\[
\text{Relative Error} = \frac{\text{Actual} - \text{Measurement}}{\text{Actual}}
\]

**Actual**

\[
\text{Radius} \rightarrow \text{Actual} \rightarrow 5.1
\]

\[
\text{Height} \rightarrow 15.1
\]

**Measured**

\[
\text{Radius} \rightarrow 5
\]

\[
\text{Height} \rightarrow 15
\]

**Surface Area**

\[
S.A. = \text{Surface Area} = 2(\text{end areas}) + 1(\text{Side Area})
\]

**End Areas are Circles**

\[
A_\odot = \pi r^2
\]

**Side Area is Rectangle**

\[
A_\square = w \times h
\]

The width is the circumference of the end circles

\[
C = 2\pi r
\]

**Actual Surface Area**

\[
S.A. = 2(\pi r^2) + 1(2\pi rh)
\]

\[
= 2(\pi)(5.1)^2 + 1(2)(\pi)(5.1)(15.1)
\]

\[= 647.2937503\]

**Measured Surface Area**

\[
S.A. = 2(\pi(5)^2) + 1(2(\pi)(5)(15))

\[= 628.3185307\]

**Relative Error**

\[
= \frac{647.294 - 628.319}{647.294}
\]

\[= 0.0293143456\]
