The University of the State of New York

REGENTS HIGH SCHOOL EXAMINATION

TENTH YEAR MATHEMATICS

Friday, January 27, 1984 — 9:15 a.m. to 12:15 p.m., only

The last page of the booklet is the answer sheet. Fold the last page along the perforations and, slowly and carefully, tear off the answer sheet. Then fill in the heading of your answer sheet.

On page 9 you will find the “Tables of Natural Trigonometric Functions” which you may need to answer some questions in this examination. Fold this page along the perforations, and tear it off also slowly and carefully.

When you have completed the examination, you must sign the statement printed at the end of the answer paper, indicating that you had no unlawful knowledge of the questions or answers prior to the examination and that you have neither given nor received assistance in answering any of the questions during the examination. Your answer paper cannot be accepted if you fail to sign this declaration.

DO NOT OPEN THIS EXAMINATION BOOKLET UNTIL THE SIGNAL IS GIVEN
Part I

Answer all questions in this part. Each correct answer will receive 2 credits. No partial credit will be allowed. Unless otherwise specified, answers may be left in terms of $\pi$ or in radical form. Write your answers in the spaces provided on the separate answer sheet.

1. The lengths of the sides of a triangle are 5, 6, and 9. The midpoints of the three sides are joined by line segments. Find the perimeter of the triangle formed by these segments.

2. The measure of the vertex angle of an isosceles triangle is $30^\circ$. Find the number of degrees in the measure of a base angle of the triangle.

3. Two adjacent sides of a rectangle measure 4 and 7. Find the perimeter of the rectangle.

4. Two angles are complementary and the measure of one angle is twice the measure of the other. Find the number of degrees in the measure of the smaller angle.

5. In triangle $ABC$, $m\angle A = 85$ and $m\angle C = 67$. What is the shortest side of the triangle?

6. Right triangle $ABC$, with right angle at $C$, is inscribed in a circle whose diameter is 10. Find the length of the median to the hypotenuse.

7. In triangle $ABC$, $DE$ is drawn parallel to $AB$ and intersects $AC$ and $BC$ at $D$ and $E$, respectively. If $CD = 4$, $DA = 2$, and $BE = 3$, find $CE$.

8. In circle $O$, the coordinates of the endpoints of diameter $AB$ are $A(2,5)$, and $B(8,1)$. What are the coordinates of the center of the circle?

9. In the accompanying diagram, chord $AB$ of circle $O$ and diameter $COD$ are parallel. Radii $OA$ and $OB$ are drawn and $m\angle C = 50$. Find $m\angle AOB$.

10. A regular hexagon is inscribed in a circle. If the length of a side of the hexagon is 8, what is the diameter of the circle?

11. If the diagonals of a rhombus have lengths 4 and 5, what is the area of the rhombus?

12. Find the distance between the points whose coordinates are $(2,7)$ and $(8,-1)$.

13. In the accompanying diagram, tangent $ABF$ is parallel to chord $CD$ and secant $ADOE$ is parallel to chord $BC$. If $m\angle A = 30$, find $m\angle BD$.

14. If $P$ is on $AB$, what is the total number of points that are 3 centimeters from $P$ and also 2 centimeters from $AB$?

15. The lengths of the bases of a trapezoid are 8 and 12. If the area of the trapezoid is 140, find the length of the altitude.
Directions (16–30): Write in the space provided on the separate answer sheet the numeral preceding the expression that best completes each statement or answers each question.

16 Which statement about triangles is always true?
   (1) A triangle cannot have any angles measuring greater than 90°.
   (2) A triangle must have at least one angle measuring greater than 90°.
   (3) A triangle must have at least two angles measuring less than 90°.
   (4) A triangle cannot have any angle measuring less than 90°.

17 The lengths of the sides of a triangle are 5, 6, and 7. If the perimeter of a similar triangle is 36, what is the length of the shortest side of the similar triangle?
   (1) 10
   (2) 6
   (3) 5
   (4) 4

18 The sides of a triangle divide a circumscribed circle into three arcs. If the measures of the arcs are in the ratio 2:3:5, the measure of the largest angle of the triangle is
   (1) 18°
   (2) 36°
   (3) 54°
   (4) 90°

19 Which statement is not always true?
   (1) If two triangles are congruent, then they are equal in area.
   (2) If two triangles are equal in area, then they are congruent.
   (3) If two squares are congruent, then they are equal in area.
   (4) If two squares are equal in area, then they are congruent.

20 Which is the converse of the statement “If this is math, then this is fun”?
   (1) If this is not fun, then this is not math.
   (2) If this is not math, then this is fun.
   (3) If this is fun, then this is math.
   (4) If this is not math, then this is not fun.

21 In the accompanying diagram, secants \( \overline{QBA} \) and \( \overline{QDC} \) are drawn to a circle from external point \( Q \). Chords \( \overline{AD} \) and \( \overline{CB} \) intersect at point \( E \). If \( m\angle ABC = 40 \) and \( m\angle DCB = 20 \), what is \( m\angle AEC \)?
   (1) 120
   (2) 60
   (3) 20
   (4) 15

22 The measure of an arc of a circle is 40°. If the diameter of the circle is 18, what is the length of the arc?
   (1) \( \pi \)
   (2) 2\( \pi \)
   (3) 3\( \pi \)
   (4) 4\( \pi \)

23 The distance from the center of a circle to a chord is 3. If the length of the chord is 8, the length of the radius of the circle is
   (1) 10
   (2) 7
   (3) 5
   (4) 4

24 What is the measure of an interior angle of a regular polygon of 8 sides?
   (1) 144°
   (2) 135°
   (3) 120°
   (4) 108°

25 An isosceles triangle has a perimeter of 5. Which could not be the length of a side of the triangle?
   (1) 1
   (2) 2
   (3) 3
   (4) 2.25

26 The lengths of the sides of a triangle are 3, 4, and 5. What is the value of the sine of the larger acute angle of the triangle?
   (1) \( \frac{3}{4} \)
   (2) \( \frac{5}{4} \)
   (3) \( \frac{3}{5} \)
   (4) \( \frac{4}{5} \)
27 What is the slope of the line whose equation is $2y = 3x - 10$?

- $\frac{3}{2}$
- $\frac{2}{3}$
- $\frac{3}{2}$
- $-3$

28 The median of an isosceles trapezoid always divides the trapezoid into

- one triangle and one parallelogram
- two trapezoids of equal area
- two isosceles trapezoids
- two congruent trapezoids

29 If the midpoints of the sides of a quadrilateral are joined consecutively, the figure formed must be a

- square
- rhombus
- rectangle
- parallelogram

30 In the accompanying diagram, triangle $ABC$ is scalene. According to the construction shown, what is $\overline{CD}$?

[Diagram of triangle ABC with point D on side AB]

- (1) the altitude to side $\overline{AB}$
- (2) the bisector of angle $C$
- (3) the median to side $\overline{AB}$
- (4) the perpendicular bisector of side $\overline{AB}$
Part II

Answer four questions from this part. Show all work unless otherwise directed.

31 Prove either \( a \) or \( b \) but not both.

\( a \) The area of a regular polygon is equal to one-half the product of its perimeter and the length of its apothem. \( [10] \)

\text{OR}

\( b \) The measure of an angle formed by two chords intersecting inside a circle is equal to one-half the sum of the measures of the intercepted arcs. \( [10] \)

32 Given: \( \triangle ABC \), \( CM \) is the median to \( AB \), \( CM \) is extended to point \( P \) such that \( CM \equiv MP \), and \( AP \) is drawn.

Prove: \( AP \parallel CB \) \( [10] \)

33 Given: parallelogram \( ABCD \), \( F \) is a point on \( DC \) such that \( AC \) bisects \( \angle FAB \), \( DE \) intersects \( AF \) at \( G \), \( AC \) at \( H \), \( AB \) at \( E \), and \( AG \equiv AE \).

Prove: \( \triangle AHC \sim \triangle CHD \) \( [10] \)

34 Given: circle \( O \), \( DEF \) is tangent at \( E \), secant \( DCBA \), \( AG \equiv GC \), \( EB \parallel HA \), \( mHA = 160 \), and \( mHE = 30 \).

Find: \( a \) m\( \overline{AG} \) \( [2] \)
\( b \) m\( \overline{D} \) \( [2] \)
\( c \) m\( \angle EBD \) \( [2] \)
\( d \) m\( \angle HAD \) \( [2] \)
\( e \) m\( \angle FEG \) \( [2] \)

35 Given: circle \( O \), radii \( OA \) and \( OB \), \( R \) is a point on \( OA \), and \( RB \) and \( AB \) are drawn.

Prove: \( RB > RA \) \( [10] \)

\( \Rightarrow \) Go right on to the next page.
36 Given: isosceles trapezoid $ABCD$, with altitude $AE$, $AD = 10$, $AB = 16$, and $m\angle D = 67$. 

(a) Find $DE$ to the nearest integer. [3]
(b) Find $DC$ to the nearest integer. [2]
(c) Find $AE$ to the nearest integer. [3]
(d) Using the results from parts $b$ and $c$, find the area of trapezoid $ABCD$. [2]

*37 Triangle $ABC$ has coordinates $A(2,3)$, $B(6,0)$, and $C(12,8)$.
(a) Show, by means of coordinate geometry, that $\triangle ABC$ is a right triangle and state a reason for your conclusion. [5]
(b) Find the area of $\triangle ABC$. [5]

* This question is based on an optional topic in the syllabus.
## Tables of Natural Trigonometric Functions

The University of the State of New York
REGENTS HIGH SCHOOL EXAMINATION
TENTH YEAR MATHEMATICS
Friday, January 27, 1984 — 9:15 a.m. to 12:15 p.m., only

ANSWER SHEET

Pupil ........................................................ Teacher ..................................................

School ...................................................................................................................

Name and author of textbook used .................................................................

Your answers to Part I should be recorded on this answer sheet.

Part I

Answer all questions in this part.

1 ................................................ 11 ................................................ 21 ................................................

2 ................................................ 12 ................................................ 22 ................................................

3 ................................................ 13 ................................................ 23 ................................................

4 ................................................ 14 ................................................ 24 ................................................

5 ................................................ 15 ................................................ 25 ................................................

6 ................................................ 16 ................................................ 26 ................................................

7 ................................................ 17 ................................................ 27 ................................................

8 ................................................ 18 ................................................ 28 ................................................

9 ................................................ 19 ................................................ 29 ................................................

10 ................................................ 20 ................................................ 30 ................................................

Your answers for Part II should be placed on paper provided by the school.

The declaration below should be signed when you have completed the examination.

I do hereby affirm, at the close of this examination, that I had no unlawful knowledge of the questions or answers prior to the examination, and that I have neither given nor received assistance in answering any of the questions during the examination.

Signature

Math. 10–Jan. '84
### FOR TEACHERS ONLY

**SCORING KEY**

**TENTH YEAR MATHEMATICS**

Friday, January 27, 1984 — 9:15 a.m. to 12:15 p.m., only

Use only *red* ink or *red* pencil in rating Regents papers. Do not attempt to *correct* the pupil's work by making insertions or changes of any kind. Use checkmarks to indicate pupil errors.

Unless otherwise specified, mathematically correct variations in the answers will be allowed. Units need not be given when the wording of the questions allows such omissions.

---

**Part I**

Allow 2 credits for each correct answer; allow no partial credit. For questions 16–30, allow credit if the pupil has written the correct answer instead of the numeral 1, 2, 3, or 4.

---

From the digital collections of the New York State Library.
Part II

Please refer to the Department's pamphlet *Suggestions on the Rating of Regents Examination Papers in Mathematics*. Care should be exercised in making deductions as to whether the error is purely a mechanical one or due to a violation of some principle. A mechanical error generally should receive a deduction of 10 percent, while an error due to a violation of some cardinal principle should receive a deduction ranging from 30 percent to 50 percent, depending on the relative importance of the principle in the solution of the problem.

(34) $a^2 = 30$

$\begin{align*}
&b = 40 \quad [2] \\
c &= 70 \quad [2] \\
d &= 70 \quad [2] \\
e &= 110 \quad [2]
\end{align*}$

(36) $a^3 = 4^3$

$\begin{align*}
&b = 24 \quad [2] \\
c &= 9 \quad [3] \\
d &= 180 \quad [2]
\end{align*}$

(37) $b = 25 \quad [5]$
