

P.I. G.G.54: Define, investigate, justify, and apply isometries in the plane (rotations, reflection, translations, glide reflections)

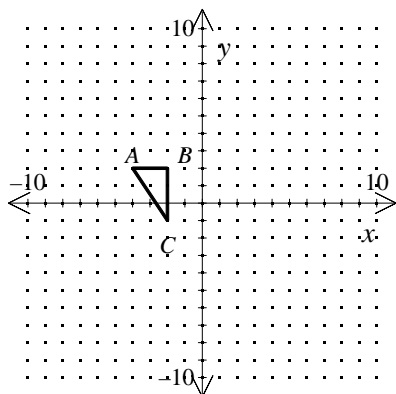

1. Draw the image produced when $\triangle ABC$ is translated $\langle 8, 1 \rangle$.

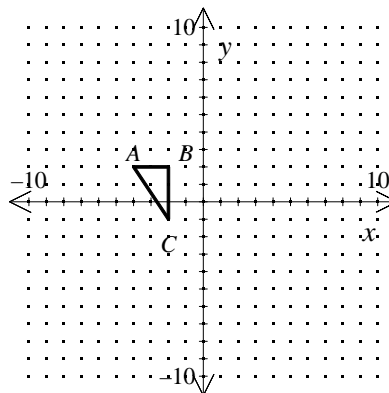

2. Draw the image produced when $\triangle ABC$ is translated $\langle -1, -4 \rangle$.

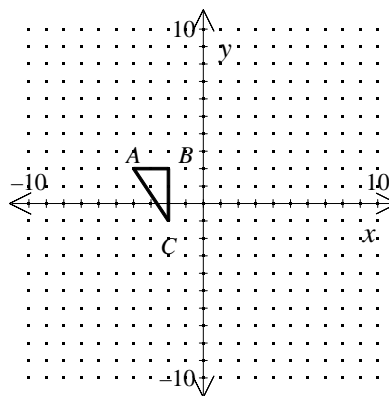

3. Draw the image produced when $\triangle ABC$ is translated $\langle 5, -5 \rangle$.

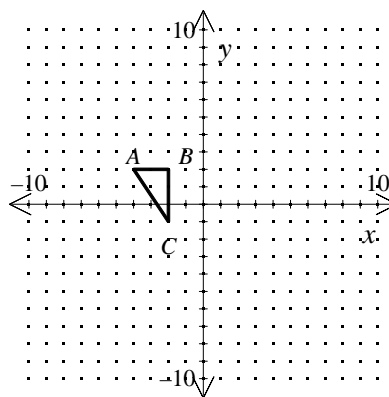

4. Draw the image produced when $\triangle ABC$ is translated $\langle 3, 4 \rangle$.

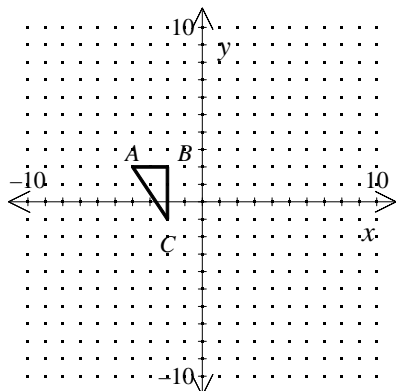

5. Draw the image produced when $\triangle ABC$ is translated $\langle 5, 6 \rangle$.

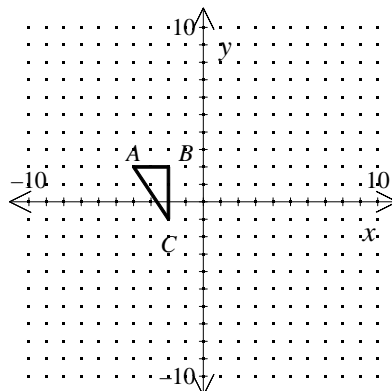

6. Draw the image produced when $\triangle ABC$ is translated $\langle 6, 3 \rangle$.

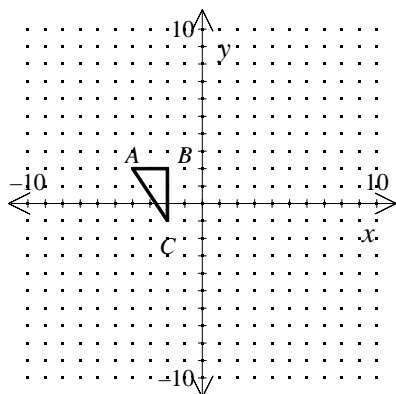

7. Draw the image produced when $\triangle ABC$ is translated $\langle 10, 7 \rangle$.

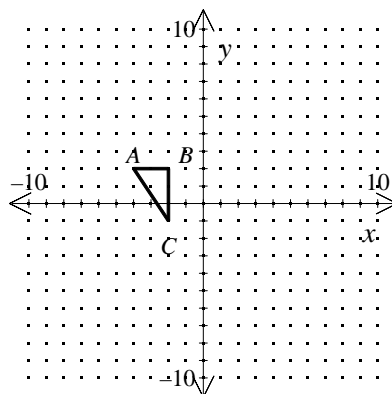

10. Draw the image produced when $\triangle ABC$ is translated $\langle 4, 2 \rangle$.

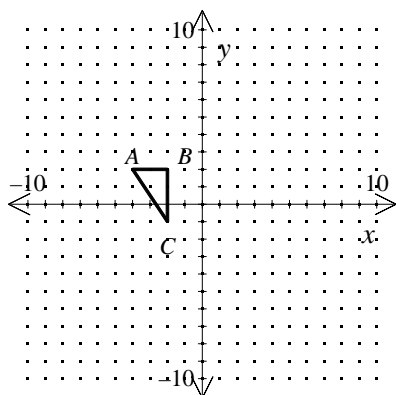

8. Draw the image produced when $\triangle ABC$ is translated $\langle -3, 5 \rangle$.

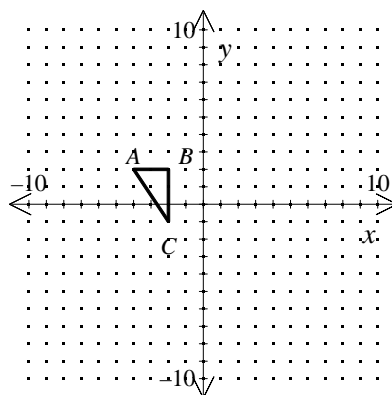

11. Draw the image produced when $\triangle ABC$ is translated $\langle 4, -2 \rangle$.

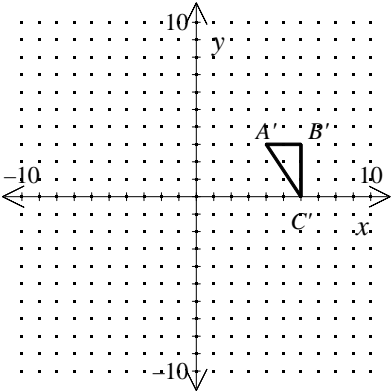

9. Draw the image produced when $\triangle ABC$ is translated $\langle 7, -1 \rangle$.

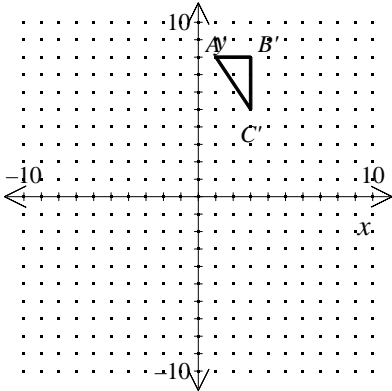

12. Draw the image produced when $\triangle ABC$ is translated $\langle -4, -4 \rangle$.
