

F.BF.A.1: Modeling Linear Functions

- A high school club is researching a tour package offered by the Island Kayak Company. The company charges \$35 per person and \$245 for the tour guide. Which function represents the total cost, $C(x)$, of this kayak tour package for x club members?
 - $C(x) = 35x$
 - $C(x) = 35x + 245$
 - $C(x) = 35(x + 245)$
 - $C(x) = 35 + (x + 245)$
- Last weekend, Emma sold lemonade at a yard sale. The function $P(c) = .50c - 9.96$ represented the profit, $P(c)$, Emma earned selling c cups of lemonade. Sales were strong, so she raised the price for this weekend by 25 cents per cup. Which function represents her profit for this weekend?
 - $P(c) = .25c - 9.96$
 - $P(c) = .50c - 9.71$
 - $P(c) = .50c - 10.21$
 - $P(c) = .75c - 9.96$
- In 2013, the United States Postal Service charged \$0.46 to mail a letter weighing up to 1 oz. and \$0.20 per ounce for each additional ounce. Which function would determine the cost, in dollars, $c(z)$, of mailing a letter weighing z ounces where z is an integer greater than 1?
 - $c(z) = 0.46z + 0.20$
 - $c(z) = 0.20z + 0.46$
 - $c(z) = 0.46(z - 1) + 0.20$
 - $c(z) = 0.20(z - 1) + 0.46$
- Alex is selling tickets to a school play. An adult ticket costs \$6.50 and a student ticket costs \$4.00. Alex sells x adult tickets and 12 student tickets. Write a function, $f(x)$, to represent how much money Alex collected from selling tickets.
- Jackson is starting an exercise program. The first day he will spend 30 minutes on a treadmill. He will increase his time on the treadmill by 2 minutes each day. Write an equation for $T(d)$, the time, in minutes, on the treadmill on day d . Find $T(6)$, the minutes he will spend on the treadmill on day 6.
- Jim is a furniture salesman. His weekly pay is \$300 plus 3.5% of his total sales for the week. Jim sells x dollars' worth of furniture during the week. Write a function, $p(x)$, which can be used to determine his pay for the week. Use this function to determine Jim's pay to the *nearest cent* for a week when his sales total is \$8250.
- Caitlin has a movie rental card worth \$175. After she rents the first movie, the card's value is \$172.25. After she rents the second movie, its value is \$169.50. After she rents the third movie, the card is worth \$166.75. Assuming the pattern continues, write an equation to define $A(n)$, the amount of money on the rental card after n rentals. Caitlin rents a movie every Friday night. How many weeks in a row can she afford to rent a movie, using her rental card only? Explain how you arrived at your answer.

F.BF.A.1: Modeling Linear Functions

Answer Section

1 ANS: 2 REF: 062101ai

2 ANS: 4

$$P(c) = (.50 + .25)c - 9.96 = .75c - 9.96$$

REF: 011807ai

3 ANS: 4 REF: 011523ai

4 ANS:

$$f(x) = 6.50x + 4(12)$$

REF: 061526ai

5 ANS:

$$T(d) = 2d + 28 \quad T(6) = 2(6) + 28 = 40$$

REF: 081532ai

6 ANS:

$$p(x) = 0.035x + 300 \quad p(8250) = 0.035(8250) + 300 = 588.75$$

REF: 011833ai

7 ANS:

$A(n) = 175 - 2.75n$ $0 = 175 - 2.75n$ After 63 weeks, Caitlin will not have enough money to rent another movie.

$$2.75n = 175$$

$$n = 63.6$$
