## 0617geo

1 In the diagram below, $\triangle A B C \cong \triangle D E F$.

Which sequence of transformations maps $\triangle A B C$ onto $\triangle D E F$ ?

1) a reflection over the $x$-axis followed by a translation
2) a reflection over the $y$-axis followed by a translation
3) a rotation of $180^{\circ}$ about the origin followed by a translation
4) a counterclockwise rotation of $90^{\circ}$ about the origin followed by a translation

2 On the set of axes below, the vertices of $\triangle P Q R$ have coordinates $P(-6,7), Q(2,1)$, and $R(-1,-3)$.

What is the area of $\triangle P Q R$ ?

1) 10
2) 20
3) 25
4) 50

3 In right triangle $A B C, \mathrm{~m} \angle C=90^{\circ}$. If $\cos B=\frac{5}{13}$, which function also equals $\frac{5}{13}$ ?

1) $\tan A$
2) $\tan B$
3) $\sin A$
4) $\sin B$

4 In the diagram below, $\mathrm{m} \widehat{A B C}=268^{\circ}$.

What is the number of degrees in the measure of $\angle A B C$ ?

1) $134^{\circ}$
2) $92^{\circ}$
3) $68^{\circ}$
4) $46^{\circ}$

5 Given $\triangle M R O$ shown below, with trapezoid $P T R O$, $M R=9, M P=2$, and $P O=4$.

What is the length of $\overline{T R}$ ?

1) 4.5
2) 5
3) 3
4) 6

6 A line segment is dilated by a scale factor of 2 centered at a point not on the line segment. Which statement regarding the relationship between the given line segment and its image is true?

1) The line segments are perpendicular, and the image is one-half of the length of the given line segment.
2) The line segments are perpendicular, and the image is twice the length of the given line segment.
3) The line segments are parallel, and the image is twice the length of the given line segment.
4) The line segments are parallel, and the image is one-half of the length of the given line segment.

7 Which figure always has exactly four lines of reflection that map the figure onto itself?

1) square
2) rectangle
3) regular octagon
4) equilateral triangle

8 In the diagram below of circle $O$, chord $\overline{D F}$ bisects chord $\overline{B C}$ at $E$.

If $B C=12$ and $F E$ is 5 more than $D E$, then $F E$ is 1) 13
2) 9
3) 6
4) 4

9 Kelly is completing a proof based on the figure below.

She was given that $\angle A \cong \angle E D F$, and has already proven $\overline{A B} \cong \overline{D E}$. Which pair of corresponding parts and triangle congruency method would not prove $\triangle A B C \cong \triangle D E F$ ?

1) $\overline{A C} \cong \overline{D F}$ and SAS
2) $\overline{B C} \cong \overline{E F}$ and SAS
3) $\angle C \cong \angle F$ and AAS
4) $\angle C B A \cong \angle F E D$ and ASA

10 In the diagram below, $\overline{D E}$ divides $\overline{A B}$ and $\overline{A C}$ proportionally, $\mathrm{m} \angle C=26^{\circ}, \mathrm{m} \angle A=82^{\circ}$, and $\overline{D F}$ bisects $\angle B D E$.

The measure of angle $D F B$ is

1) $36^{\circ}$
2) $54^{\circ}$
3) $72^{\circ}$
4) $82^{\circ}$

11 Which set of statements would describe a parallelogram that can always be classified as a rhombus?
I. Diagonals are perpendicular bisectors of each other.
II. Diagonals bisect the angles from which they are drawn.
III. Diagonals form four congruent isosceles right triangles.

1) I and II
2) I and III
3) II and III
4) I, II, and III

12 The equation of a circle is $x^{2}+y^{2}-12 y+20=0$. What are the coordinates of the center and the length of the radius of the circle?

1) center $(0,6)$ and radius 4
2) center $(0,-6)$ and radius 4
3) center $(0,6)$ and radius 16
4) center $(0,-6)$ and radius 16

13 In the diagram of $\triangle R S T$ below, $\mathrm{m} \angle T=90^{\circ}$, $R S=65$, and $S T=60$.

What is the measure of $\angle S$, to the nearest degree?

1) $23^{\circ}$
2) $43^{\circ}$
3) $47^{\circ}$
4) $67^{\circ}$

14 Triangle $A^{\prime} B^{\prime} C^{\prime}$ is the image of $\triangle A B C$ after a dilation followed by a translation. Which statement(s) would always be true with respect to this sequence of transformations?
I. $\triangle A B C \cong \triangle A^{\prime} B^{\prime} C^{\prime}$
II. $\triangle A B C \sim \triangle A^{\prime} B^{\prime} C$
III. $\overline{A B} \| \overline{A^{\prime} B^{\prime}}$
IV. $A A^{\prime}=B B^{\prime}$

1) II, only
2) I and II
3) II and III
4) II, III, and IV

15 Line segment $R W$ has endpoints $R(-4,5)$ and $W(6,20)$. Point $P$ is on $\overline{R W}$ such that $R P: P W$ is 2:3. What are the coordinates of point $P$ ?

1) $(2,9)$
2) $(0,11)$
3) $(2,14)$
4) $(10,2)$

16 The pyramid shown below has a square base, a height of 7 , and a volume of 84 .

What is the length of the side of the base?

1) 6
2) 12
3) 18
4) 36

17 In the diagram below of triangle $M N O, \angle M$ and $\angle O$ are bisected by $\overline{M S}$ and $\overline{O R}$, respectively. Segments $M S$ and $O R$ intersect at $T$, and $\mathrm{m} \angle N=40^{\circ}$.

If $\mathrm{m} \angle T M R=28^{\circ}$, the measure of angle $O T S$ is

1) $40^{\circ}$
2) $50^{\circ}$
3) $60^{\circ}$
4) $70^{\circ}$

18 In the diagram below, right triangle $A B C$ has legs whose lengths are 4 and 6.

What is the volume of the three-dimensional object formed by continuously rotating the right triangle around $\overline{A B}$ ?

1) $32 \pi$
2) $48 \pi$
3) $96 \pi$
4) $144 \pi$

19 What is an equation of a line that is perpendicular to the line whose equation is $2 y=3 x-10$ and passes through $(-6,1)$ ?

1) $y=-\frac{2}{3} x-5$
2) $y=-\frac{2}{3} x-3$
3) $y=\frac{2}{3} x+1$
4) $y=\frac{2}{3} x+10$

20 In quadrilateral $B L U E$ shown below, $\overline{B E} \cong \overline{U L}$.

Which information would be sufficient to prove quadrilateral $B L U E$ is a parallelogram?

1) $\overline{B L} \| \overline{E U}$
2) $\overline{L U} \| \overline{B E}$
3) $\overline{B E} \cong \overline{B L}$
4) $\overline{L U} \cong \overline{E U}$

21 A ladder 20 feet long leans against a building, forming an angle of $71^{\circ}$ with the level ground. To the nearest foot, how high up the wall of the building does the ladder touch the building?

1) 15
2) 16
3) 18
4) 19

22 In the two distinct acute triangles $A B C$ and $D E F$, $\angle B \cong \angle E$. Triangles $A B C$ and $D E F$ are congruent when there is a sequence of rigid motions that maps

1) $\angle A$ onto $\angle D$, and $\angle C$ onto $\angle F$
2) $\overline{A C}$ onto $\overline{D F}$, and $\overline{B C}$ onto $\overline{E F}$
3) $\angle C$ onto $\angle F$, and $\overline{B C}$ onto $\overline{E F}$
4) point $A$ onto point $D$, and $\overline{A B}$ onto $\overline{D E}$

23 A fabricator is hired to make a 27-foot-long solid metal railing for the stairs at the local library. The railing is modeled by the diagram below. The railing is 2.5 inches high and 2.5 inches wide and is comprised of a rectangular prism and a half-cylinder.

How much metal, to the nearest cubic inch, will the railing contain?

1) 151
2) 795
3) 1808
4) 2025

24 In the diagram below, $A C=7.2$ and $C E=2.4$.

Which statement is not sufficient to prove
$\triangle A B C \sim \triangle E D C$ ?

1) $\overline{A B} \| \overline{E D}$
2) $D E=2.7$ and $A B=8.1$
3) $C D=3.6$ and $B C=10.8$
4) $D E=3.0, A B=9.0, C D=2.9$, and $B C=8.7$

25 Given: Trapezoid $J K L M$ with $\overline{J K} \| \overline{M L}$
Using a compass and straightedge, construct the altitude from vertex $J$ to $\overline{M L}$. [Leave all construction marks.]

26 Determine and state, in terms of $\pi$, the area of a sector that intercepts a $40^{\circ}$ arc of a circle with a radius of 4.5 .

27 The diagram below shows two figures. Figure $A$ is a right triangular prism and figure $B$ is an oblique triangular prism. The base of figure $A$ has a height of 5 and a length of 8 and the height of prism $A$ is 14. The base of figure $B$ has a height of 8 and a length of 5 and the height of prism $B$ is 14 .

Figure A

Figure $\mathbf{B}$

Use Cavalieri's Principle to explain why the volumes of these two triangular prisms are equal.

28 When volleyballs are purchased, they are not fully inflated. A partially inflated volleyball can be modeled by a sphere whose volume is approximately $180 \mathrm{in}^{3}$. After being fully inflated, its volume is approximately $294 \mathrm{in}^{3}$. To the nearest tenth of an inch, how much does the radius increase when the volleyball is fully inflated?

29 In right triangle $A B C$ shown below, altitude $\overline{C D}$ is drawn to hypotenuse $\overline{A B}$. Explain why $\triangle A B C \sim \triangle A C D$.

30 Triangle $A B C$ and triangle $D E F$ are drawn below.

If $\overline{A B} \cong \overline{D E}, \overline{A C} \cong \overline{D F}$, and $\angle A \cong \angle D$, write a sequence of transformations that maps triangle $A B C$ onto triangle $D E F$.

31 Line $n$ is represented by the equation $3 x+4 y=20$. Determine and state the equation of line $p$, the image of line $n$, after a dilation of scale factor $\frac{1}{3}$ centered at the point $(4,2)$. [The use of the set of axes below is optional.] Explain your answer.

32 Triangle $A B C$ has vertices at $A(-5,2), B(-4,7)$, and $C(-2,7)$, and triangle $D E F$ has vertices at $D(3,2)$, $E(2,7)$, and $F(0,7)$. Graph and label $\triangle A B C$ and $\triangle D E F$ on the set of axes below. Determine and state the single transformation where $\triangle D E F$ is the image of $\triangle A B C$. Use your transformation to explain why $\triangle A B C \cong \triangle D E F$.

33 Given: $\overline{R S}$ and $\overline{T V}$ bisect each other at point $X$ $\overline{T R}$ and $\overline{S V}$ are drawn

Prove: $\overline{T R} \| \overline{S V}$

34 A gas station has a cylindrical fueling tank that holds the gasoline for its pumps, as modeled below. The tank holds a maximum of 20,000 gallons of gasoline and has a length of 34.5 feet.

A metal pole is used to measure how much gas is in the tank. To the nearest tenth of a foot, how long does the pole need to be in order to reach the bottom of the tank and still extend one foot outside the tank? Justify your answer. [ $1 \mathrm{ft}^{3}=7.48$ gallons]

35 Quadrilateral $P Q R S$ has vertices $P(-2,3), Q(3,8)$, $R(4,1)$, and $S(-1,-4)$. Prove that $P Q R S$ is a rhombus. Prove that $P Q R S$ is not a square. [The use of the set of axes below is optional.]

36 Freda, who is training to use a radar system, detects an airplane flying at a constant speed and heading in a straight line to pass directly over her location. She sees the airplane at an angle of elevation of $15^{\circ}$ and notes that it is maintaining a constant altitude of 6250 feet. One minute later, she sees the airplane at an angle of elevation of $52^{\circ}$. How far has the airplane traveled, to the nearest foot? Determine and state the speed of the airplane, to the nearest mile per hour.
